“What we need is nothing else than to substitute better ideas for bad ideas. This I hope and am confident, will be done by the rising generation.”

Ludwig von Mises

Hotel accommodations for out-of-town attendees have been reserved at the New York Sheraton Hotel, Seventh Avenue and 56th Street. The complete conference package which includes all meals, hotel accommodations for two nights and conference sessions is available for $200. The same package without hotel accommodations is $140. Registration begins at 3:00 p.m. on Friday, October 30. For more information, contact Richard Seiden, Executive Director or Dyanne Petersen, Conference Coordinator, at:

CENTER FOR LIBERTARIAN STUDIES

OPENING SHOTS

BILL BIRMINGHAM

"INDIGENT PARENTS ARE not automatically entitled to have a lawyer appointed to represent them at court proceedings where government authorities are trying to take away their children, the Supreme Court ruled yesterday." (San Francisco Chronicle, June 2, 1981) Not a word, of course, from Jerry Falwell, Jesse Helms, or the rest of the "pro-family" fakers.

Political power grows out of the barrel of a pastry gun in Oakland, California, where La Viennese Pastry caters to the special needs of those cursed with proletarian sympathies and a bourgeois belly. For just $18 they will sell you a delicious El Salvador torte, decorated with a dove, a rifle, and the slogan "U.S. Hands Off El Salvador." Two-thirds of the purchase price goes to the Salvadoran cause, so the buyer can help dig the grave of Yankee Imperialism with his dessert fork. The mouth waters at the prospect of future experiments in radical sweet: Pascalin popovers, Kampuscha eclairs, East Berliners, Smash-the-Klan oreos....

When he was running for President Ronald Reagan was all in favor of tuition tax credits, which would allow parents of students attending private schools to deduct a part of the tuition from their income tax. But he doesn't seem to want them just yet. Assistant Secretary of the Treasury John E. Chabot recently asked the Senate to hold off on such legislation. "It would be difficult to work it in this year, given the budgetary restraints," he said, but tuition tax credits "will be at the top of our agenda at the appropriate time." Famous last words. The "budget-busting" bill now pending in the Senate Finance Committee would let a parent deduct up to $250—raised to $500 in 1983—per student. (In 1980 Libertarian candidate Ed Clark proposed a tax credit of up to $1200.)

Want to blow up a nuclear reactor? Why not ask the Nuclear Regulatory Commission for advice? Israel did... and got it. Last October 9th—the same month the Israeli cabinet decided to bomb the Iraqi reactor at Tawitha—Iranian scientists met with NRC specialists to discuss the dynamic response of reactor subsystems to explosions within the reactor containment building." Specifically, they wanted to know about the effects of "a 1000 kilogram charge that penetrates concrete barriers and detonates after penetration." By a strange coincidence, that's just what the Israelis used at Tawitha. When The Washington Post (June 19, 1981) broke the story, NRC officials swore up and down that "We had no inkling in advance of any offensive proposition [sic]." But according to an internal NRC memo obtained by the Post: "Because of any lack of real interest in underground siting as a protective measure against sabotage, it was unclear whether the Israelis were interested in defending their own plants or in destroying someone else's...." U.S. officials "have insisted that they had no advance knowledge of the Israeli raid," said the Post, "raising the question of whether NRC scientists' suspicions about Israel's intentions disappeared in the federal bureaucracy." Whether you find that comforting, we suppose, depends on whether you'd rather be ruled by competent knaves or incompetent fools.

We can just imagine what Senator Proxmire will say when he learns that the U.S.
Army is studying the anaerobic formation of adenosine triphosphate. Which is too bad; for this research, far from meritng a Golden Fleece Award, could someday save lives on the battlefield. The cells of the human body run on adenosine triphosphate (ATP), which they form by metabolizing sugars. Most of the chemical reactions that form ATP require oxygen from the blood, but about 5 percent of the body's ATP comes from anaerobic (non-oxygen using) reactions. According to Dr. Paul R. Sonher of Letterman Army Institute in San Francisco, this opens the possibility of someday producing a drug that would stimulate more anaerobic reactions. Such a drug might allow a person to survive the loss of his last drop of blood, which of course would be of inestimable value to the military. To say nothing of the Internal Revenue Service.

In 1980 Ms. Judith E. Miller, of Saginaw County, Michigan, shot and killed her boyfriend — and now she must pay the price. For the next five years she can neither get married nor live with a man without a court's permission. "This court takes a great chance in not sentencing you to prison," admitted Judge Gary McDonald at the sentencing. "I am depending on you. You have slipped in the past.... Do you think Charlie Manson would promise not to listen to "Helter Skelter" again, if we let him out?"

Never mind your chromosomes; marijuana can seriously impair one's ability to play pro football. Dr. Graham Reedy saw the effects of the killer weed as team physician for the Oakland Raiders: "Even those who only used small amounts and not on game day just couldn't keep up the peak performance required of professional football players. Regular users were usually gone by the end of one year." Kiss decriminalization goodbye.

According to the Department of Energy, the government-owned gaseous diffusion plant at Oak Ridge, Tennessee, has released at least 11,270 pounds of uranium since it was opened in 1943. The radioactive uranium hexafluoride gas escaped in 121 accidents; some of it was recovered "but we can't say most of it was." Some of the rest escaped into the atmosphere, some may have "slipped into cracks in the building," but take heart: officials doubt that any was stolen. The DOE, by the way, only counted those accidents in which at least a kilogram of uranium escaped. The loss of less than 2.2 pounds of uranium, it seems, is too trivial to mention.

Last month yr hmbl svnt reported that the administration was siding up to the thuggish rulers of Guatemala, and even contemplating giving them military assistance. The assistance has now begun. On June 5 the Commerce Department quietly approved the sale of $3.1 million worth of jeeps and military trucks to Guatemala, an act which ordinarily would have necessitated a review of Guatemala's record on human rights. That very same day, however, the administration thoughtfully removed such vehicles from the list of items which can't be sold to regimes "engaged in consistent patterns of gross violations of internationally recognized human rights" — thereby saving a small fortune in white-wash. And a fortune is what it would take; the president of Guatemala, General Fernando Romeo Lucas Garcia, is the sort of man who could — and did — call Reagan's predecessor "Jimmy Castro." But we aren't likely to hear any more of that, not as long as the aid keeps coming.

Great Moments in Government Frugality: On June 29, 1981, the Pentagon authorized full production of the Navy's controversial F-18 fighter, opening the door for the eventual purchase of 1366 of the planes. The F-18, which was designed as a lighter, cheaper companion to the $23 million F-14 fighter, is now estimated to cost $30 million apiece.

Not everyone approves of cozying up to Guatemala. After news of the jeep and truck deal finally seeped out, 54 House Democrats sent a letter of protest to Secretary of State Alexander Haig, claiming the move "appears to reflect a conscious effort by the State Department to undermine the human rights provisions of our arms export control laws." (Wonder what gave them that idea?) The group's leader, Rep. Gerry Studds (D-MA), had earlier called it "appalling... I don't know of many governments that routinely murder people." For our part, we don't know of very many governments that don't.

To the great distress of chairman David Rockefeller, Henry Kissinger was not reelected to the Council on Foreign Relations' board of directors. He was one of nine candidates for eight seats on the board, and when the ballots were counted, Kissinger was odd man out. "Officials at the council," The Washington Post reported, "said it would be a mistake to read great significance in the outcome." Maybe, but somehow we doubt that Super-K will ever again make the cover of Time magazine — and it couldn't happen to a more deserving guy. It's like having Blind Pew tip you the black spot.

"Like everyone else," says Rosemary Wells of Northeastern University's School of Dentistry, "the Tooth Fairy is feeling the bite of inflation." A recent survey by Ms. Wells found that she must now pay an average of $64 per lost tooth, compared with $30-$45 years ago and $19¢ in 1956. Other modern woes afflict the Tooth Fairy as well: In San Francisco she must now operate under the name of the Tooth Gay.

Arms what? "Eugene V. Rossow, President Reagan's nominee to head the Arms Control and Disarmament Agency, said yesterday that the Reagan administration would probably not be able to begin negotiations to limit strategic weapons with the Soviet Union until March 1982. 'It may be that a brilliant light will strike our officials ... but I don't know anyone who knows what it is yet that we want to negotiate about.'" (The New York Times, June 23, 1981)

Think, Gene, think!
Arms race: pro and con

I WOULD LIKE TO DRAW attention to the following errors of fact appearing in Jeffrey Rogers Hummel's article in the May issue of Libertarian Review:

1. The United States monopolized the atomic bomb with deliberate militaristic intent during the 1945-1949 period.

   ...in fact, the United States proposed the Baruch Plan in 1947, whereby all nuclear weapons and related research would have been subordinated to international control. The Soviet Union's rejection of this plan was the definitive first step on the road to the "arms race."

2. The Soviet Union had no means of delivering atomic weapons in the 1945-1955 period.

   ...in fact, the Soviet Union had the Tu-4 long-range bomber (a replica of the U.S. B-29) available since 1947, and produced to the number of 1500. A new design, the Tu-85, was first flown in 1951 and was comparable to the U.S. B-36. This did not go into production due to the imminent availability of the Tu-16, Tu-20, and M-4 strategic bombers in 1954-1955. Therefore, the most that can be asserted is that the Soviet Union lacked a delivery capability comparable to the B-36 between 1948 and 1954. This is substantially different from saying that they had no delivery capability whatsoever.

3. The United States was "well along the road to deploying" the Navaho missile, before the program was cancelled in 1957.

   ...this is a distortion of the truth, inasmuch as the completed missile had not even been flight-tested prior to its cancellation. As Hummel elsewhere observes, "testing...is different from...deploying." The more so, when testing has not even taken place.

4. United States B-52s could have attacked Soviet ICBMs in the half-hour required for their pre-launch preparation.

   ...this is utterly preposterous, as B-52s could travel only about 250 miles in a half-hour interval — totally insufficient to pre-emptively attack Soviet ICBMs already in preparation for launch. One could make a more forceful argument to the effect that the Soviets would have had enough time to launch even in the face of such a bomber attack, given the large distances between the ICBM fields and the points at which bombers would have been detected by Soviet air defense radars.

5. The table on page 15 presents the U.S. as being first with SLBMs (1954), thus beating the Soviets, who deployed their SLBMs in reaction to the U.S.

   ...in fact, the Soviet SS-N-4 "Sark" SLBM was the first operational SLBM in the world (1955-1956), to the ultimate number of 125 missiles in 44 submarines (7 Zulu-, 22 Golf-
...in fact, Ernest Fitzgerald states in The High Priests of Waste that the Minuteman system was subject to a 40 percent defunct rate in 1967.

7. MRV capability was first deployed by the United States in 1964, thus beating the Soviets by 8 years.

...in fact, the Polaris A-3 was retrofitted with MRVs during the period 1971-1972, contemporaneously with Soviet introduction of MRVs on the SS-18 Mod 4. Soviet testing of MRVs was noted as early as 1969, thus making it untrue that their interest in MRVs and MIRVs was only mere reaction to U.S. developments.

8. The U.S. is stated to have 1.85 million troops available to combat a potential 1.7 million Soviet troops.

...even if these accounting ground rules are correct (which is arguable), this statement neglects an important qualification: (1) the U.S. reerves number about 2 million, whereas the Soviet reserves number about 7 million; and (2) only about 50 percent of U.S. troops are front-line combat troops (the rest being devoted to logistic support), whereas the Soviet combat troops are a higher percentage of their whole than for the U.S. (i.e., about 70 percent).

9. The SS-18 Mod 2 is presented as having a low kill potential against Minuteman silos (CEP of 1400 feet gives Pk = 40 percent).

...in fact, the CEP figure is taken from 1977 references. More recent data suggest a CEP closer to 600 feet, which results in a Pk of over 90 percent. A force of 300 SS-18s equipped with 8 RVs apiece would have the ability to attack the Minuteman system twice over. If, as has been suggested, the SS-18 is capable of mounting 10-14 RVs per missile, this target becomes overwhelming.

10. The Minuteman III is presented as having a significant counterforce capability against Soviet ICBMs.

...in fact, Hummel assumes that Soviet silos are hardened only to 2500 psi, whereas the SS-17, SS-18, and SS-19 are estimated to be in silos hardened to about 4500 psi. With a yield of 335 kT and a CEP of 730 feet, the Minuteman Pk is only 40 percent. A CEP improvement to 430 feet gives a Pk of 70 percent. Even with this improved result, a two-on-one attack is required, which limits Minuteman III to an attack against 8.25 Soviet ICBMs. This is only half the total Soviet ICBM force.

The import of the above is that Mr. Hummel's argument against a possible Soviet strategic threat is based on willful distortion and/or negligent recitation of historical and technical data. The clear evidence of prejudiced analysis casts doubt on many of his other statements. A serious possibility exists that this article has been conceived as propaganda to minimize libertarian concerns over the subject of national defense.

In the interest of brevity, I will close with this question: Do you have the editorial integrity to present these faults before your readership, that they may benefit from a full disclosure of information on this subject?

MICHAEL J. DUNN
Federal Way, WA

Hummel replies:

IN FOUR CASES (1, 6, 7, and 9 as they appear in Dunn's letter), Dunn himself is guilty of error, while in another four cases (2, 3, 8, and 10), Dunn has either misinterpreted or misrepresented what I said. In the remaining two cases (4 and 5) Dunn's criticisms have some validity.

I will consider first the four cases where Dunn himself has committed errors of fact.

Charge 1: Soviet rejection of the Baruch Plan puts the onus for instigating the arms race upon the Soviets.

The Baruch Plan (which was submitted to the UN in June of 1946, not 1947) set up a series of stages through which control over atomic plants and raw materials throughout the world would be transferred to an International Atomic Energy Authority. Throughout the plan's transition period, while the rest of the nations involved were subject to inspection, the U.S. would retain its stockpile of atomic weapons. In negotiating with the U.S. over atomic energy, the only source of leverage possessed by the Soviets was U.S. ignorance concerning the progress of Soviet atomic research and the extent of Soviet uranium and thorium resources. The first stage of the Baruch Plan required a complete survey of atomic raw materials and an inspection of atomic facilities, but then all parties had to agree that one stage was completed before moving to the next. Thus, the plan required that the Soviets surrender all their meager bargaining advantages, after which the U.S. could indefinitely postpone further implementation of it.

The plan did not envisage atomic disarmament, but rather an atomic league with the United States as the senior member, transferring the U.S. atomic monopoly to an international body which could maintain its monopoly through the use of atomic weapons without being subject to a veto. Being unable even to veto the use of the atomic bomb against themselves, the Soviets at first rejected the Baruch Plan outright. When, toward the end of the year, the Soviets began to move closer to the U.S. position, Bernard Baruch, who headed the U.S. negotiating team at the United Nations, refused to budge an inch, held that all features of his plan were non-negotiable, and forced a vote in the Security Council on the last day of the year in which his plan went down to Soviet rejection.

Rather than being a sincere gesture, the Baruch Plan was a cynical propaganda ploy that enabled the U.S. government to pursue its militaristic policy of atomic diplomacy while posing as an altruistic advocate of peace and disarmament. The most recent scholarly study of the Baruch Plan, Gregg Herken's The Winning Weapon, based upon documents declassified in the seventies, as well as older treatments of the origin of the Cold War, such as Lloyd C. Gardner's Architects of Illusion, substantiate my interpretation.

Charge 6: The U.S. Minuteman, a solid-fueled ICBM (intercontinental ballistic missile) was not as reliable as its liquid fueled predecessors.

Dunn refers to a report in A. Ernest Fitzgerald's The High Priests of Waste that approximately 40 percent of the Minuteman missiles were down in the 1967 period. That 40 percent figure refers not to the en-
tioned Minuteman force, but to the Minuteman II, which was first deployed in 1966 as a supplement to the Minuteman I. Dunn also provides no statistic for the first generation of U.S. liquid-fueled ICBMs with which to compare the 40 percent figure. The first-generation liquid-fueled ICBMs were so notoriously unreliable that Herbert York, who served as Director of Defense Research and Engineering under Eisenhower, estimates in Race to Oblivion that only 20 percent of the operational Atlas liquid-fueled ICBMs would have reached their targets in a real war situation.

Dunn’s evidence, therefore, says nothing about the comparative reliability of the Minuteman and its predecessors, but only indicates that the Minuteman II was initially less reliable than the Minuteman I.

Charge 7: The U.S. first deployed MRVs (multiple reentry vehicles) not in 1964, but after 1970.

The U.S. government did not officially confess to doing so until the seventies, but most sources date the fitting of MRV warheads in the mid-sixties. In a chronology of the arms race in World Armaments and Disarmament: SIPRI Yearbook 1974), the internationally respected Stockholm International Peace Research Institute lists 1964 as the year the U.S. put MRVs in service. The fairly cautious Center for Defense Information, headed by retired Admiral Gene LaBoque, agrees on this date and places the first U.S. MRV test in 1963. George B. Kistiakowsky, President Eisenhower’s Special Assistant for Science and Technology, wrote in the March 22, 1979 issue of The New York Review of Books that MRVs were placed on Polaris missiles in the mid-sixties. The most judicious examination of the publicly available evidence, Ronald L. Tammen’s MRV and the Arms Race, is also consistent with the 1964 date.

Charge 9: In computing the hard-target kill probability for the Soviet SS-18 ICBM, I used dated information on the missile’s accuracy from a 1977 reference.

This charge is simply false. I relied on two sources, both of which were published in 1980. John M. Collins’s U.S. Soviet Military Balance and Soviets’ Nuclear Arsenal Continues to Proliferate, Aviation Week and Space Technology (June 16, 1980). Collins, who had access to classified information, is a hard-boiled militarist with no incentive to underestimate Soviet capabilities and Aviation Week and Space Technology is the semi-official propaganda arm of the aerospace industry. I am skeptical of Dunn’s estimate that the CEP of the SS-18 is already at 600 feet, with a kill probability of better than 90 percent, which comes from the March 9, 1981 issue of Aviation Week and Space Technology and which I have not seen confirmed in any other recent source. In any case, it appeared after I had submitted my article.

The determination of CEPs (circular error probabilities) for Soviet missiles is a difficult undertaking. Not only do the Soviets keep secret their CEPs, but U.S. intelligence estimates on Soviet CEPs are also classified. Published figures, therefore, being guesses about U.S. intelligence guesses about about Soviet capabilities, vary considerably. The two sources I used for my figures were the most reliable and up-to-date I could find at the time, with the additional advantage that they corroborated each other. Even if one accepts 600 feet as the SS-18’s CEP, there are still other degrading factors, such as missile reliability, warhead fratricide, accuracy degradation and operational realities, that would dissipate Dunn’s alleged overwhelming margin for the Soviets against U.S. ICBMs.

Now let us turn to the four cases where Dunn has either misinterpreted or misrepresented.

Charge 2: The Soviet Tu-4 “Bull” bomber, introduced in 1946, disproves my claim that the Soviet Union had no means of delivering atomic weapons prior to 1955. I asserted that before 1955, the Soviet Union was unable “to strike the U.S. with nuclear weapons [emphasis added],” which is not the same as denying that the Soviets had any nuclear delivery vehicle whatsoever. The Soviet Tu-4 was a medium-range bomber with a combat radius of 1500 miles. Since the Soviet Union had no foreign bases within 1500 miles of the U.S. and had not perfected in-flight refueling, its medium-range bombers did not pose the same atomic threat to the U.S. that U.S. medium-range bombers posed to the Soviet Union.

My article should have qualified my claim with two exceptions. First, Alaska has always been within range of Soviet medium-range bombers. Second, if the Tu-4 had been flown on a one-way suicide mission out to its maximum 3000 mile range, then the northwest port of the United States, approximately as far south as San Francisco and as far east as Montana, was vulnerable to a Soviet nuclear strike.

Charge 3: The fact that the Navaho cruise missile, when cancelled in 1957, had not been flight-tested disproves my assertion that the U.S. was “well along the road to deploying” the Navaho.

The criticism hinges on one’s interpretation of the metaphor, “road to deploying.” The Navaho project was initiated in 1947. Although it was cancelled ten years later, in 1957, the missile was still successfully flight-tested 11 times in 1958. Thus, when cancelled, the Navaho was two, or no more than three, years from deployment. I think that a weapons system that has been in the process of development for ten years and that is a maximum of three years from deployment can be characterized, without exaggeration, as “well along the road” to deployment.

Charge 8: My claim that the U.S. had 1.85 million troops available for a potential war in Europe, as opposed to 1.7 million for the Soviet Union, ignores (1) Soviet superiority in reserves and (2) the larger proportion of Soviet military personnel assigned to front-line combat roles.

This criticism leaves me discomfited. The paragraph immediately following my comparison begins with this sentence: “Of course, when comparing only ground troops, the Soviet advantage reappears, and it extends, at least in numbers, to such military hardware as tanks and artillery.” In effect, Dunn treats as an error of fact an admittedly suggestive but factual comparison, despite my bringing to the reader’s attention a far more relevant limitation upon the comparison than either of the two which Dunn condemns me for omitting.

Charge 10: The Minuteman III ICBM does not have a significant counterforce capability, because it could only eliminate half of the Soviet ICBM force in a counterforce attack. Dunn’s calculations about the number of Soviet silos that a U.S. first strike would destroy is a non sequitur. My statement was, “In short, U.S. and Soviet counterforce capabilities are roughly equivalent, and neither side has the ability to make a successful first strike [emphasis added].” The unfeasibility of a first strike for the U.S. has no bearing on my claim that U.S. and Soviet counterforce capabilities are roughly equivalent, because a Soviet first strike is equally unfeasible.

Rough equivalence: the single-shot hard-target kill probabilities of the U.S. SS-18 range from 40 to 85 percent; those of the U.S. Minuteman, from 55 to 85 percent. Substituting Dunn’s inflated estimate of SS-18 accuracy in Charge 9 increases the upper bound on the SS-18 kill probabilities to 93 percent.

Dunn also wishes to double the overpressure which a Soviet ICBM silo can withstand, from 2500 to 4500 psi (pounds per square inch). I discounted this report and stuck with the more generally accepted 2500 psi figure, largely because Kosta Tsipis in Nuclear Explosion Effects on Missile Silos raises strong doubts about the physical possibility of hardening a silo beyond 3000 psi. Even the Soviets do not know with absolute certainty how much overpressure their silos can withstand. (This uncertainty also extends to U.S. silos, but so far, Dunn and I seem to be able to agree on a 2000 psi hardening for them.) If we incorporate the 4500 psi figure, it reduces the lower bound on the kill probabilities for the Minuteman III to 43 percent. The new range — 40 to 93 percent for the SS-18 versus 43 to 85 percent for the Minuteman III — still sustains the assertion that U.S. and Soviet counterforce capabilities are roughly equivalent.

Finally, the two cases where Dunn’s criticisms have some
validity.

Charge 5: The table in the sidebar which LR added to my article presents the U.S. as deploying a SLBM in 1954, prior to the Soviets, while the first U.S. SLBM was not actually deployed until 1960.

This criticism is absolutely correct. But a minor change in the wording — substituting "submarine-launched missile" for "submarine-launched ballistic missile" — would make the 1954 date accurate, because that is the year in which the U.S. deployed the Regulus, a submarine-launched cruise missile. Dunn neglects to mention that the SS-N-4 was more analogous to the U.S. Regulus than to the Polaris: Soviet submarines had to surface before launching it, and only carried two or three missiles per sub. The first Soviet SLBM similar to the Polaris, the SS-N-6, did not appear until eight years after the Polaris.

Charge 4: U.S. B-52 long-range bombers were too slow to attack the early Soviet ICBMs within the half-hour required for pre-launch preparation.

The strength of this criticism depends upon the location of Soviet ICBMs as well as on the speed of the B-52. My statement applied to the year 1960, when the very few operational Soviet ICBMs were emplaced near Plesetsk, 475 miles north of Moscow. This site was approximately 400 miles south of the Arctic Ocean and 300 miles east of the Finnish border. The U.S. B-52G, which became operational in 1959, could cover within half an hour 330 miles at its top speed and 295 miles at its cruising speed. Thus, while Dunn is technically correct and the U.S. B-52s could not reach the Plesetsk ICBM site within the one-half hour after being detected by Soviet radar, they could get very close.

In addition, the half-hour fueling time for Soviet ICBMs was an absolute minimum, and fueling might have taken much longer, depending on alert status and crew training. And Soviet ICBMs were also threatened by two U.S. medium-range bombers in 1960 — the B-58 could cruise at twice the speed of sound and cover 738 miles within the half-hour after detection, and the B-47 jet bomber, though not quite as fast as the B-52, had been flying 500-mile, low-level training missions since 1959 and might have been able to fly beneath Soviet radar. Of course, as the Soviets set up ICBM sites further from their borders, the vulnerability to U.S. strategic bombers declined, although it did not disappear entirely until the Soviets put their ICBMs in hardened silos.

There may be some mistakes in my arms race article that even Michael Dunn overlooked, but if his letter represents the strongest attack that someone professionally employed by the military-industrial complex can mount, I am more than satisfied.

**Likes**

I WAS DELIGHTED TO SEE Leonard Read's pamphlet, "Conscience on the Battlefield" reprinted in the June LR, for I had just read it and was wondering how it could get a wider audience. LR's decision to follow the reprint with Roy Child's "Leonard E. Read: an appreciation" was a lovely idea, too.

The American Democrat

By James Fenimore Cooper

Introduction by H. L. Mencken

An easily readable study of political democracy as attempted in the United States. Cooper, an aristocrat in mind and manners, defends democracy provided it remains representative rather than direct.

He cites the dangers inherent in direct democracy and describes the elements of character and principle that he feels must be preserved in both people and politics if the republic is to survive.

The Introduction by H. L. Mencken illuminates Cooper's all-but-forgotten place in the history of American political discourse. Hardcover $9.00, Paperback $4.00.

Prepayment is required on all orders not for resale. We pay postage on prepaid orders. Please allow 4 to 6 weeks for delivery. All orders from outside the United States must be prepaid in U.S. dollars. To order, or for a copy of our catalogue, write:

SEPTEMBER 1981
A move toward the draft?
BACK IN JULY 1980, FOUR million 18- and 20-year olds were being told by the government to register for the draft, or else. The "or else" meant a possible five year prison sentence and/or $10,000 fine. Since then, another three million or so 18-year olds have been commanded to sign up. Millions did, but one million didn't. Such is the gargantuan enforcement task the Reagan administration faces in its first year of office.
Reagan, you will recall, used to shout his objections to conscription from every street corner. In his acceptance speech before the Republican National Convention that same July 1980, Reagan proclaimed "I do not favor a peacetime draft or registration." When asked by The New York Times a month before the November election if he would sign an executive order to abolish registration, Reagan replied "I'd think very seriously of doing it, yes."

The candidate's radical rhetoric ended the day he was elected to the Oval Office. Queried on draft registration shortly after his victory, the President-elect backed away from his earlier pledge to end the signup. Nine days after the Inaugural Ball, Reagan answered a question on the conscription issue by saying that the administration would "make a decision on what to do with it down the road somehow."

Even before the Supreme Court decision on women and the draft was announced, the government was moving to prosecute draft nonregistrants. The Selective Service System (SSS) sent a letter to 160 people June 17, on the eve of the high court ruling, informing the recipients that the SSS was "required by law to refer possible violators of the Military Selective Service Act to the Department of Justice." The agency gave the potential nonregistrants 15 days to respond and threatened that if they did not, "We will send your name to the Department of Justice for investigation and possible prosecution."

U.S. TO PROSECUTE

YOUTHS TO COMPEL SIGNUP FOR THE DRAFT, blared The New York Times on July 21. "With approval of White House, Service Asks Proceedings Against a List of 134." Of the original 160 to receive the Selective Service threat, 103 were referred by the agency to the Justice Department. A copy of the cover letter SSS sent with the nonregistrant files revealed that the records of another 31 people who had not been sent letters were also referred for study and possible indictment.

As of the end of July, Reagan officials continued to deny that Justice had any White House authority for further action, but a clear danger signal has emerged. Bureaucratic machinations have been allowed to rumble on, which indicate yet another drift toward the loss of civil liberties for young men in this country.

Such an inexorable movement may run contrary to Reagan's rhetorical flourishes against draft registration, but the potential indictment of draft nonregistrants is in concert with the administration's newly announced plans to prepare for the possibility of up to two-and-a-half wars on other nation's lands.

One must look back to 1969, when Richard Nixon had his hands full with a real war, to discover a governmental defense policy based on a two-and-a-half war strategy. Ronald Reagan, determined to bluff and bluster his way past an emerging Soviet threat, has introduced the spectre of protecting our security on the historic land of Europe, on the deserts of the Persian Gulf, and in brush-fire skirmishes with the Russian tide in an El Salvador or a Nicaragua.

This horrific perception has led to the "need" for conscription. The revived two-and-a-half-war myth entails an additional 250,000 troops to fill the ranks of an expanded Army, Air Force, National Guard, and Reserve units. The time has come for the American people to declare that they do not have to condone the Reagan defense plan. The contradictions of such a posture are becoming all too clear.

Despite the administration's talk of supposed communist dominance in the El Salvadoran civil conflict, a torrent of White House mail registered a 10-1 popular reaction against the administration's archaic cold war logic. NATO allies are seriously questioning the Reagan policy of belligerent anti-Sovietism while the U.S. pushes for deployment of nuclear weaponry on European soil.

Security analysts are beginning to state publicly that pouring $1.5 trillion into an unrestrained Pentagon may further our demise rather than aid our defense.

And, finally, the internal squabbling over the revival of the draft within the Reagan administration is forcing the White House to acknowledge the deepest contradiction of all: despite the glowing pictures painted by the editorial page pundits, the nation will not tolerate an actual draft induction. Many a young man decided to register in 1980 who vowed never to be inducted by a draft. Close to 1,000,000 who were called to register for arms refused to do so, confident of the support of millions more. Nationwide polls on the question of the draft fluctuate weekly, but the legacy of our most recent history foretells an ultimate rejection of political leaders who would yet again drag this country's people into another exercise in madness.

This administration is seemingly unable to cope with the vagaries of its bureaucratic departments, and therein lies the fatal flaw in the entire Reagan foreign policy. A campaign based on the promotion of an all-volunteer force seemed to be the beginning of August, but has been lost within the structures that comprise the United States government. Ronald Reagan promised to "get government off our backs," but his legions propose to jail women for choosing to abort, gay men for declaring their sexual proclivities, and draft-age men for refusing to participate in the hysteria of war preparations. The fact that this would involve jailing tens of millions does not seem to faze them. They are too busy attempting to maintain the enormous power of the American government.

It is not so much administrative decisiveness which threatens our freedom as it is political confusion. Reagan campaigned on the plank of abolishing draft registration — he
bureaucracy, who all favor some deregulation. On the other side are the liberals — and a peculiar allies — who oppose it. While both sides claim to represent the "public" and its interests, the unfortunate fact is that most of the public doesn't even know what is going on.

The "Radio Deregulation Act of 1981" (S.270) would not deregulate all that much. Station licenses would be granted for an indefinite period of time instead of for three years. This would free radio stations from so much paperwork and uncertainty, but licenses could still be revoked on "fairness" grounds. The most important change wrought by S.270 is its restriction of the FCC's power to regulate program content. Until recently, the FCC issued guidelines controlling the quantities of news and public affairs programming heard on the air. It required program logs of all stations and forced them to ascertain the "needs and interests" of their service areas. Its guidelines also governed the length and frequency of commercials. The FCC stopped using these powers in January of 1981, noting that market forces regulated the quantity of commercials and public affairs programming better than its own guidelines. But S.270 would legalize an end to the FCC's power over radio programming, with the important exception of the Fairness Doctrine. This assures that the FCC will change its program guidelines in the future, regardless of who the Commissioners are or who is President.

Television deregulation does not go even this far. The Television Licensing and Renewal Act of 1981 (S.601) would extend the license period from three to five years and leave programming regulations untouched. Both S.270 and S.601 would make another important change: the FCC would be empowered to use lotteries to award broadcasting licenses. Currently, when there are mutually exclusive applications for a radio or TV station license the FCC is required by law to hold "comparative hearings." When TV channels are available they frequently attract as many as 10 applicants. Comparative hearings are costly, time consuming anachronisms by which the FCC attempts to evaluate the applicants' character, financial stability, and dedication to "community service." Aside from its other defects, the system simply cannot handle the caseload any more. Like many others involved in spectrum management, Dale Hatfield, Associate Administrator of the National Telecommunications and Information Administration complains that "the FCC is too often faced with selecting from among equally well-qualified applicants. In effect, they must distinguish the indistinguishable and decide the undecidable. The results are incredible delays and excessive costs that serve mostly to postpone or delay service to the public, raise prices to users, consume FCC and court resources, and simply enrich a legion of communications attorneys." Of course, lotteries are just as arbitrary as the hearings, but at least they're quicker and cheaper.

Liberarians can support without qualification any measure which reduces governmental control over program content. There is no reason why electronic communications should not be accorded at least the same First Amendment protection enjoyed by the press. The old argument that broadcasters possess more power than traditional media won't wash, simply because there is more competition among electronic media outlets than daily newspapers. Moreover, a greater and greater amount of the information which ends up on the printed page got there the same way radio signals or TV images get to our receivers: by wire, satellite, or other telecommunications techniques.

Economically, though, the bills simply don't go far enough. A truly free market in broadcasting would assign freely transferrable rights to users of the electromagnetic spectrum and allow unrestricted entry to new competitors. The current bills remove some government regulations. But the "deregulation" takes place within the framework of government ownership of the airwaves. Neither of the bills would even begin to establish market allocation of the spectrum. Entry into the broadcasting market is still severely restricted by governmental control of spectrum allocation and assignment. There is still no price system, no free exchange of broadcasting rights, and not nearly enough competition. Because of this, the existing bills will reinforce the privilege of established broadcasters.

Considerations of both justice and economics, then, indicate that deregulation of existing broadcasters ought to be coupled with efforts to deregulate entry and foster new competition. In its current form, the FCC does seem to be inching in this direction. It has ceased to hobble cable. It has entertained proposals to reduce AM radio channel spacing from 10kz to 9kz, a change that would make room for about 400 new stations. Pressure from established broadcasters has forced the FCC to reexamine its position on this, but it still may go through with it. The FCC is also planning to make spectrum space available for Direct Broadcast Satellite (DBS) systems. DBS is the beginning of the end of the national TV networks government-fostered monopoly, because it makes a large number of new "networks" technically and economically feasible. Established broadcasters are fighting against this too. Predictably, broadcasters complain of government regulation when it gets in their way, but fight for it tooth and nail when it protects them from both competition and regulation.

The hypocrisy of the broadcasters, however, pales by comparison with that of the "liberal" opponents of deregulation. As these modest deregulatory bills moved toward a vote this Summer, "liberal" groups such as the National Citizens Committee for Broadcasting, the National Abortion Rights Action League, Americans for Democratic Action and the American Civil Liberties Union marched to defeat them. Their official line is that government control over the broadcasting industry must be preserved to assure "public access" to the media. They see license renewal hearings and program content control not as forms of censorship but as preservers of free speech in the electronic media.

Their use of the rhetoric of free speech, however, is belied by the allies they have at
These fellows are out to suppress certain kinds of speech and to exclude certain portions of the public from the media. And the contemporary liberal's belief in government enforced "fairness" is aiding their cause.

The issue of telecommunication regulations makes clearer than ever before the intimate connection between the free market and civil liberties; i.e., between liberalism in the economic and social spheres. There has always been an inherent contradiction between the modern liberals' desire to license and regulate the electronic media and their professed belief in freedom of speech. Now, with broadcasting deregulation on its way, they must choose between the two. On one side is the First Amendment, on the other is the Moral Majority.

— Milton Mueller

The hopeful science

THE DISMAL SCIENCE.

That's perhaps the best-known nickname for economics, and many of those who sat and suffered through the supply and demand courses for widgets in their college Econ I courses five or twenty or forty years ago would agree that the nickname fits. For most Americans, economics is for other people, the people "who understand that stuff," the people who become university professors and high-level federal bureaucrats.

For most of us, going to the store and balancing our checkbooks is all the economic experience we want to have. Reading in our newspapers about CPI and balance-of-trade and M1 and what Paul Volcker said can be intimidating and bewildering. We try to make sense of it, because we know it affects us, but we're not sure exactly how, and no one seems to want to give us a satisfactory explanation.

It may be that the essential problem with traditional economics is its lack of humanity. What, really, do curves, graphs, and the gross national product have to do with us? How are we supposed to get excited about a "science" based on the assumption that non-existent persons have perfect knowledge about non-existent objects? If n represents the marginal utility of the last widget produced, should we take our last $20 and go to a restaurant, or should we put it in the bank?

Yet while traditional economics appears remote and inhuman to most of us, the people "who understand that stuff" have been hard at work for most of this century, shaping the policy of government and directly affecting our lives. From fractional reserve banking to pump-priming to guns-and-butter, to tax expenditures, to safety nets, their policies, stemming from economic theories which take pains to factor out the actions of individual human beings, buffet these same human beings about as though they were so many ping-pong balls in a wind tunnel.

A wrong theory, in and of itself, is of no particular threat, but when a wrong theory is translated into government policy by its adherents, tragedy and injustice ensue. And the predominant economic theories and policies of this century have been wrong, often tragically wrong. For if government's manipulation of money and credit during the 1920s brought on the Great Depression, if Franklin Roosevelt's massive (for that time) intervention into the market prolonged the Depression and provided the excuse for our entry into World War II, if Lyndon Johnson's statistical juggling created the myth that we could afford to "save" Vietnam with half a million troops, and if the mad currency inflation of Presidents Nixon, Ford, Carter, and apparently Reagan results in a society of individuals hopelessly trapped by rising prices, then the costs of traditional economic theories and policies in terms of human misery have been tragically high indeed.

Traditional economics, based on a view of human beings as interchangeable integers within a neatly packaged society, has failed. As its pristine theories and interventionist policies—from Keynesianism to the newest supply-side fads—rapidly unravel, it is no surprise that a diametrically opposing school of economic thought—what is known as the Austrian school—is experiencing a resurgence. Austrianism, which views individual human action as the primary element upon which to base economic theory, provides a framework not only for the study of economic behavior but also for the issues of justice, freedom, individual rights, and peace which are inevitably affected, for good or ill, by the economic policies of governments.

Austrianism is not new. Its traditions extend back well into the nineteenth century, but were supplanted, nearly to the point of extinction, by opposing theories and policies more in step with increasing state power. But a few strong-minded individuals kept the Austrian theories alive, developing and expanding them virtually alone, and the greatest of these was Ludwig von Mises (1881-1973), whose works and teachings form the foundation of today's young, flourishing Austrian school.

This month, September, is the centennial of von Mises's birth. It is to his life, his work, his commitment to individual human liberty, and to the hope for the future his legacy represents, that we proudly dedicate this issue of The Libertarian Review.

ENCOURAGING AND SUPPORTING LIBERTY THROUGH SCHOLARSHIP, THE CORNERSTONE OF A FREE SOCIETY

The Institute for Humane Studies exists to support and advance the work of scholars who are daily advancing freedom, or publicly opposing the advance of statism.

You can help build this cornerstone, through an Institute Membership. You can help advance freedom or publicly oppose the advance of statism . . . by helping to support our seminars, conferences, research papers, and publications . . . sponsored by your Institute Membership.

You are concerned about advancing the cause of freedom. You are already part of an elite group who supports their concern with more than just talk.

Your Institute Membership will help you advance that concern, and Institute Membership has personal benefits. Members receive a 50% discount on selected Institute publications. This year's featured publications, with the Member's Savings price, are listed below. And through our publications, you'll be more familiar with the best ideas and arguments supporting the case for the free society.

Many Members find Institute publications to be a good source of material for their personal conversations or writing. Good arguments and supporting data about . . . sometimes just the argument or fact to clinch a point, or change a mind.

So please support the Institute. Advance the study of the free society . . . the cornerstone of a society of free individuals. And take advantage of the Member's discount on books.

Rufus T. Firefly rides again

CHRIS HOCKER

THERE ARE TWO SEPARATE and distinct entities occupying the little truncated diamond of swampland on the Potomac River between Virginia and Maryland. One is called “Washington, D.C.,” or usually just “Washington.” Washington is the Nation’s Capital, the seat of the national government. It’s where the administration and the federal bureaucracy are.

The other entity is called “the District of Columbia,” or usually just “the District.” The District is where people live, do their shopping, and pay taxes. Lots of taxes.

The White House, the Lincoln Memorial, and the restaurant Sans Souci are in Washington. Dupont Circle, Eastern Market, and the restaurant El Caribe are in the District. Living in Washington must be miserable; I wouldn’t wish it on my worst enemy. Living in the District, however, has its pleasures and charms, as well as its drawbacks.

One of the drawbacks—although it includes a certain element of perverse charm—is the government of the District of Columbia, consisting of a mayor, an 11-member City Council, and a bureaucracy as impenetrable as are the heads of most of the people who staff it. As near as I’ve been able to tell, the District government serves only one useful function: to utterly destroy the myth propounded by conservatives and other connoisseurs of fantasy that levels of government which are “close to the people” are somehow better and more responsive than those which are farther away.

To be fair about it, the District government has had some serious obstacles to overcome, placed in its way by the Washington government. Not too
could live with prohibition without getting out of hand. Antiquated liquor laws persist to this day in the District.

When Home Rule finally came to the District about ten years ago, District voters made the least of it, mainly electing a series of officials alternating between power-hungry schemers and posturing airheads, with an occasional lawbreaker thrown in for diversity. One City Council member, while in office, was arrested and convicted of assaulting and biting (yes, biting) a tow truck operator in a parking lot. He finally started serving his jail term five years after the incident; the delay was in part because he was a public servant and in part because he was and is an ordained Methodist minister. An elected member of the School Board has managed to break all records for sustained lunacy by verbally and physically abusing his colleagues and their staffs, and by running up massive bills attending various conferences in a number of foreign countries having nothing to do with education. During the Iranian hostage crisis, he took it upon himself to mediate between the U.S. government and the Iranian captors, calling the embassy in Tehran almost daily from his District office and distributing lengthy single-spaced documents proposing "solutions" to the crisis, including a suggestion that the Iranians release all Spanish-surnamed hostages and keep the rest.

The fact that most elected District officials are walking re-creations of Groucho Marx's Rufus T. Firefly character doesn't quite make up for the fact that there isn't a single shred of ideological consistency of any stripe which might explain what they do. It would be comforting, for instance, to be able to say to yourself, "Aha, the reason the City Councilman bit the tow truck driver was his deep commitment to such-and-such a philosophical world-view." Unfortunately, however, most District officials have the ideology of a bivalve, and from a libertarian perspective, their decisions are almost always wrong. On economic issues, their attitude is, "If it moves, regulate and tax it." On civil liberties issues, they think, "If it moves, repress it." On foreign policy issues ... well, you wouldn't ordinarily think that the District government would have a foreign policy, but the example of the School Board member and the Iranian hostages proves otherwise. Far more serious was a recent School Board decision to provide a list of high school seniors to the Selective Service System. Just trying to help, I guess.

Several weeks ago, one elected City Council member, David Clarke by name, decided to brace this current of craziness with a set of proposed revisions to the District's criminal code. Now Clarke is somewhat unusual in that he possesses a discernible ideological framework in which he operates: more or less that of a left-wing social democrat. He has, moreover, a reasonably strong commitment to civil liberties and understands the problems created by attempting to regulate individual personal behavior. This further distinguishes him from his colleagues, most of whom wouldn't recognize the Bill of Rights if they found it taped to the doors of their refrigerators. Clarke's proposed revisions to the District criminal code included decriminalizing consensual sex between teenagers; specifically, lowering the "age of consent" to 12 years so long as the partner was no more than four years older, but maintaining penalties for all forced sex, as well as for sex between adults and children.

Clarke's rationale seemed sensible enough: it's ridiculous to turn a couple of kids into criminals for having sex, as long as we're cleaning up the laws in this area, let's get rid of the ridiculous parts. The Judiciary Committee of the City Council agreed, and passed Clarke's package of revisions unanimously.

And then the District's newspapers got a hold of the story, and you would have thought that Clarke had advocated unconditional surrender to the Russians. Headlines varied, but their essential message was "Clarke Calls For Legalizing Kid Sex." This brought out the Moral Majority-types of all political persuasions and ethnic backgrounds, organized into groups with names sounding like "Concerned Citizens for Decency," and "Committee to Postpone Puberty Indefinitely," and Lord knows what else. Clarke's alleged "kid sex bill" became the Number One news item in the District for a solid week. He held a news conference at which he tried to explain what his bill was really about, which he was able to do lucidly enough, but it was like reciting the Gettysburg Address to a convention of Bulgarian steelworkers. Both The Washington Post and the Washington Star solemnly editorialized against the evils of encouraging teenage sex, with the Star contributing the brilliant observation that since teenagers are never arrested for violating the present law, there's no sense changing it. Finally, the City Council voted to kill Clarke's bill — by voice vote, of course.

Clarke's revision was essentially trivial, little more than a housekeeping measure designed to make District law in this matter give at least a passing nod toward reality. And it was arguably the first sensible thing to come out of the District government since the Councilman who bit the tow truck driver was defeated for re-election. Watching the District government in operation is like watching a Mel Brooks movie. Even though what goes on is offensive and in bad taste, as long as you're there, you might as well laugh.

Of course, you can walk out of a bad movie, and probably even get your money back. But it's hard to walk away from the place you live, and it's impossible to get a refund on the taxes you pay. And the tragic aspect of this tragicomic situation is that virtually — not the Post, or the Star, or the business community, or neighborhood leaders — ever really objects to it. After all, a government with the size, power, and visibility of the District's has a lot of resources to spread around. With the circuses comes the bread.

The issue here isn't that the District has a "bad" government which with some major alterations could be transformed into a "good" government. There's no inherent reason why the District's example of government run amok couldn't happen in Needles, California or Kokomo, Indiana. So if you find yourself praying for relief from Our Government Which Art in Washington, save a prayer for the government which art in the District. And save a few more for Needles and Kokomo.
The privilege to work

SHELDON RICHMAN

AT LEAST EVERY SIX months, some enterprising reporter ventures into the garment district of New York City looking for scandal: illegal aliens working in sweatshops. The reporter’s message is a grab-bag of contradictions. Sweatshops (he says) indicate that the government hasn’t yet fully stamped out capitalist exploitation. The presence of illegal aliens indicates that non-citizens are taking jobs from true citizens. What is the reader or viewer to conclude? That only documented citizens should be allowed to work in sweatshops? Or that out of sympathy for illegal aliens, we should send them back to a place they preferred to leave? Whether the villain of the story is the businessman or the wetback, you can be sure that the government will be portrayed with clean hands and a pure heart. It is, against great odds, works valiantly to save American labor from the twin evils of exploitation and cheap, foreign competition.

Yet anyone with a clear head probably wonders why the reporter neglects some obvious questions. A recent CBS television news story is fairly typical. The reporter, Richard Wagner, describes the sweatshops as dirty, unsafe, and illegal, then notes that there are more of them than ever, “chiefly because of the soaring number of illegal aliens in this city.”

The camera pans to show a dingy, crowded sewing room with people hard at work. The pathos is overwhelming, and the CBS crew goes in for the kill. Wagner speaks with a woman from Honduras who is making less than the legal minimum wage. She says she was told the minimum wage is not for piece workers.

“Infuriated that this was not true,” Wagner reports, “and that she was being exploited, Ophelia said she needs the money.” The per capita income in Honduras, we’re told, is $480 a year. She is making $100 each 60-hour week. Even Wagner had to concede that “the money, meager though it is, often looks good compared to what they’ve come from.” Nevertheless, the solution promoted by interviews with government officials is the closing of sweatshops and the cessation of illegal immigration.

The viewer is justified in wondering why the employer is portrayed so poorly. Hasn’t he, after all, provided a relatively lucrative option to people otherwise consigned to abject poverty? If the options are few, is it the fault of those who provide them? If the conditions are wretched, why do the workers stay there, rather than seek better conditions?

The last question tears asunder all the premises of the story. Workers such as Ophelia are subject to exploitation, but it is not the classical Marxian version. For example, there are indeed cases where a worker, having performed the job, is denied the pay he or she was promised. It is also true that illegal aliens have their array of options artificially narrowed. So what is the source of this exploitation? It is, contrary to every one of these news reports, the government, specifically the Immigration and Naturalization Service (INS).

If an American citizen is not paid for his work as promised, he can sue the employer for breach of contract. If the citizen dislikes the working conditions, he can complain to the employer or use any of dozens of ways to discover alternatives. But these are precisely the kinds of things an illegal alien cannot do without risking deportation. An illegal’s ability to improve his or her condition is so grievously hampered when anyone can threaten to call INS the moment the person “steps out of line.” But who is the ultimate exploiter: the person who threatens or the source of that power, the government? When Wagner says, “The exploited workers, in large part, seem willing to continue to labor in silence,” he shamefully ignores the government-sponsored threat that forces this “willful” decision on the workers.

Illegal aliens lack a constituency. The government is their enemy. So are most labor unions, which exist to stifle the competition. (Check Cesar Chavez’s horrible record on this issue. The exception among unions reportedly is the Teamsters, which allegedly operates some sweatshops. The ICC sees to it that illegals don’t compete with the truckers.) Much of the business community would have a natural common interest with aliens, because they are potential employees and customers. But too obvious a public sympathy would tend to get them in trouble with workers and unions, and open them to the accusation of being exploiters.

The taxpayers have been maneuvered into hostility against immigrants by a welfare state that requires compulsory “charity.” This creates the spectacle of refugees from tyranny being sneered at by Americans whose recent forebears were once in the same circumstances.

Despite all this, 2.7 million people are in the United States illegally. The Border Patrol, even with help from the Ku Klux Klan, hasn’t been able to stop the movement across the U.S.-Mexican border. Mexicans, Haitians, Cubans, and El Salvadorans still manage to sneak in. This has led officials to seek new solutions. (A very old solution—liberty—is out of the question, of course.) A Reagan administration task force recently proposed a set of measures so horrendous that its authors deserve a dose of their own medicine. First—and this is the only good part—amnesty would be granted to the illegal immigrants now here. This is not motivated by a consideration of justice, simply by helplessness. To sell this “generous” amnesty to the country, several other measures are proposed. Hiring illegal immigrants would be a crime. To make sure that employers know who is legal and who is not, everyone would be issued a counterfeit-proof Social Security card. The task force conceded that this “is a national identity card by another name” and “an additional intrusion of government into our daily lives.” But they didn’t let that stop them. (A Carter task force rejected this measure.)

Nor is the end of all illegal immigration not the only problem the task force had to solve. There is also the refugee problem. To prevent repetition of the Cuban and Haitian exoduses, the task force proposes that the President be empowered to have the Coast Guard
intercept boats en route to the U.S. INS officers would board
the boats and determine on the
spot who was eligible for
asylum. The others would be
returned to the home country.
Those admitted to the U.S.
would be held in camps, which
the task force itself said would
resemble concentration camps
and would bring charges of
racism.

The admittedly draconian
measures are thought neces-
sary because "the amnesty will
be a big thing to swallow polit-
ically. The only way to sell it is
to say it's a one-time thing and
it won't happen again. That's
where tough enforcement
comes in."

President Reagan has not yet
decided whether to accept the
recommendations, which are
derived by Attorney General
William French Smith. In a
speech before the Business
Council in May, Smith promis-
ed "a comprehensive and ra-
tional policy on immigration
and refugees" because "our so-
ciety cannot much longer
countenance the dislocations,
sometimes invisible, that result
from the swelling onslaught of
illegal aliens."

On the contrary. What our
society can no longer counten-
nance is hypocrizesy. How else
can one describe an adminis-
tration that professes devotion
to individual freedom and lim-
ited government, and that de-
clares holy war on communism
for its denial of human dignity,
while simultaneously entertain-
ing proposals to restrict free
movement and issue national
ID cards to those who "belong" here?

Once again, we arrive at the
junction of economic freedom
and civil liberties. Employers
are to be told whom they can-
not hire, and to enforce this, all
are to be issued a government
serial number, which presum-
ably will be required to show
on order. The reason is the
arbitrary lines called na-
tional boundaries, which may
not be crossed without permis-

Devotion to liberty means
more than playing with budg-
et and taxes and talking a
good game. It means working
to remove the state's imposi-
tions on human freedom.
And freedom is a necessity for
those on both sides of Amer-
ica's borders.
A Centennial Celebration

The Legacy of Ludwig von Mises
RALPH RAICO

It is said that a number of years ago, when Bill Buckley was at the beginning of his career of college-speaking, and somewhat more tolerant of libertarians than he is today, he once wrote two names on the blackboard: thereby nicely dramatized the point that students in his audience were being presented with only one side of the great world-forming debate between capitalism and socialism. The name of the defender of democratic socialism—I think it was Harold Laski, possibly John Dewey—was recognized by most of those present. The name of Ludwig von Mises was entirely unknown to them. Needless to say, the situation has not basically improved since then (unless perhaps in the sense that most college students would now recognize the name of William F. Buckley, Jr.). How has it been possible that the great majority of economics and social science students, even at elite American universities, are completely unfamiliar with Mises? Even the New York Times, in its notice at the time of his death in October 1973, termed Mises “one of the foremost economists of this century,” and Milton Friedman, though from a completely different tradition of economic thought, has called him “one of the great economists of all time.”

But Mises was even more than a great economist. Throughout the world, among knowledgeable people—in German-speaking Europe, in France, in Britain, in Latin America, in our own country—Mises was famous as the great twentieth century champion of a school of thought which could be said to have a certain historical importance and a certain intellectual respectability: the one that began with Adam Smith, David Hume, and Turgot, and included Humboldt, Bentham, Benjamin Constant, Tocqueville, Acton, Böhm-Bawerk, William Graham Sumner, Herbert Spencer, Pareto, and many others. Offhand, one would have thought that this acknowledged position alone would have entitled Mises to being presented within the “pluralistic” setting of left-liberal Academe.

And then there were Mises’s scientific achievements, which were extraordinary. For example, it is conceded on all sides that in the whole discussion revolving around the viability of a system of central economic planning, Mises played the key role. Quite possibly the great intellectual scandal (still unadmitted) of the past century has been that the vast international Marxian movement, including thousands upon thousands of professional thinkers in all fields, was for generations content to discuss the whole issue of capitalism vs. socialism solely in terms of the alleged defects of capitalism. The question of how, and how well, a socialist economy would function, was avoided as taboo. It was Mises’s accomplishment—and a sign of his superb independence of mind—that he has brushed aside this pious “one-just-doesn’t-speak-of-such-things,” and to have presented comprehensively and arresting the problems inherent in attempting rational economic calculation in a situation where no market exists for production goods. Anyone familiar with the structural problems with which the more advanced Communist countries are continually faced and with the debate over “market socialism,” will perceive the significance and continuing relevance of Mises’s work in this field alone.

How then can we account for the fact that those who managed to take a Laski and a Thorstein Veblen—or even a Walter Lippmann and a Kenneth Galbraith—seriously as important social philosophers somehow could never bring themselves to familiarize their students with Mises or to show him the marks of public recognition and respect that were his due (he was, for example, never president of the American Economic Association)? At least part of the answer, I think, lies in what Jacques Reuff, in a warm tribute, called Mises’s “intransigence.” Mises was a complete doctrinaire and a relentless and implacable fighter for his doctrine. For over sixty years he was at war with the spirit of his age, and with every one of the advancing, victorious, or merely modish political schools, left and right.

Decade after decade he fought militarism, protectionism, inflationism, every variety of socialism, and every policy of the interventionist state, and through most of that time he stood alone, or close to it. The totality and enduring intensity of Mises’s battle could only be fueled from a profound inner sense of the truth and supreme value of the ideas for which he was struggling. This—as well as his temperament, one supposes—he produced a definite “arrogance” in his tone (or “apocalyptic” quality, as some of us in the Mises seminar fondly called it, using one of his own favorite words), which was the last thing academic left-liberals and social democrats could accept in a defender of a view they considered only marginally worthy of toleration to begin with. (This would largely account, I think, for the somewhat greater recognition that has been accorded Friedrich Hayek, even before his greatly deserved Nobel Prize. Hayek is temperamentally much more moderate in expression than Mises ever was, preferring, for instance, to avoid the old slogan of “laissez faire.” And it is hard to imagine Mises making such a gesture as Hayek did in dedicating The Road to Serfdom “to socialists of all parties.”)

But the lack of recognition seems to have influenced or deflected Mises not in the least. Instead, he continued his work, decade after decade: accumulating contributions to economic theory; developing the theoretical structure of the Austrian School (which one may read about in Murray Rothbard’s very lucid and intelligent little book, The Essential von Mises); and, from his understanding of the laws of economic activity, elaborating, correcting, and bringing up
to date the great social philosophy of classical liberalism.

Now, within the classical liberal tradition, distinctions may be drawn. One very important one is between what may be termed “conservative” and “radical” liberals. Mises belonged to the second category, and on this basis may be contrasted to writers, for instance, such as Macaulay, Tocqueville, and Ortega y Gasset. There was very little of the Whig about Mises. The vaunted virtues of aristocracies; the alleged need for a religious basis for “social cohesion;” the reverence for tradition (it was somehow always authoritarian traditions that were to be revered, and never the traditions of free thought and rebellion); the fear of the emerging “mass-man,” who was spoiling things for his intellectual and social betters; the whole cultural critique that later provided a substantial foothold for the attack on the consumer society—these found no place in Mises’s thinking.

To take an example, Tocqueville, in Democracy in America, at one point cries out: “Nothing conceivable is so petty, so insipid, so crowded with paltry interests — in a word, so anti-poetic — as the life of a man in the United States.” Whether or not this judgment is true, Mises would never have bothered to make it. As a utilitarian liberal, he had more respect for the standards by which ordinary people judge the quality of their own lives. It is highly doubtful that Mises felt any of the qualms of liberals like Tocqueville at the Americanization of the world. (In fact, their attitude towards America would be a good rough criterion for categorizing classical liberals as “radical” or “conserva-

Mises and the next Generation

DON LAVOIE

There is an old cliche that great men of ideas seldom live to enjoy the fruits of their fame and influence, but in the case of Ludwig von Mises, it must have been still more frustrating—he began his career with a splash, as one of the most prominent young students of a world-renowned economist, Eugen von Böhm-Bawerk, only to watch his influence wane steadily throughout his very productive career. His first book, The Theory of Money and Credit (1912) was for years considered in Europe to be the standard work on monetary theory, and his famous challenge to socialists, “Economic Calculation in the Socialist Commonwealth” (1920), launched what must still be considered the most lively and important debate ever to grace the field of comparative economics. But then he found himself vainly resisting the overwhelming trends of the tumultuous thirties, he was uprooted by World War II to this country, and, by the forties, he had virtually no influence on his contemporaries. Most frustrating of all must have been the fact that his arguments had never been refuted, nor even seriously challenged; they were simply dismissed. It is not difficult to understand his bitterness when he wrote, “I have come to realize that my theories explain the degeneration of a great civilization; they do not prevent it. I set out to be a reformer, but only became the historian of decline.”

In an age of infatuation with the application of sophisticated mathematical techniques to economic theory, there seemed to be no room for such an early and vociferous critic of this trend as Mises. With the triumph of Keynesian macroeconomics, abstract equilibrium modeling, and econometric number-crunching, Mises and his Austrian school found themselves all but excluded from any influence in the profession. Anyone who had compared the journal articles of the last quarter-century with those of the previous 75 years would understand how drastic a change has gripped the economics profession, and how whole schools of thought could have been swept aside in the profession’s rush to flex its newfound mathematical “muscles.” Most economists ignored Mises’s warnings that their exclusive concentration on states of equilibrium could blind them to examining the process of equilibration, and that their macro models and statistical averages could obscure their view of the individual choices that underlie social phenomena.

It is as astonishing as it is ironic that, in the brief span of eight years between Mises’s death and the hundredth anniversary of his birth, we have seen his influence not only not stop its tragic decline, but increase to a degree far higher than it ever had been in this country. Before the mid-seventies, it seemed as if the only people who took Mises seriously were a few of those crusty hard-money advocates outside of academia, and a handful of dedicated scholars like F. A. Hayek, Ludwig Lachmann, Israel Kirzner, and Murray Rothbard, who had never been seduced by mathematical technique. Suddenly at a conference at South Royalton, Vermont, and at a series of conferences since, there appeared dozens of bright young scholars, familiar with and serious about Mises’s work. Within four years of Mises’s death, twelve major conferences on Austrian economics had already been held, several books had been published in an excellent new series called Studies in Economic Theory (now continued through New York University Press), and young Austrian theorists could be found doing graduate work at such prestigious institutions of higher learning as Harvard, UCLA, Stanford, and the University of Chicago.

The awarding of the Nobel prize to Hayek further accelerated the resurgence of interest in Austrian theory, and Austrian conferences were beginning to boast the attendance of scores of bright young professors and graduate students eager to extend Mises’s work. At New York University, where Mises had taught in his last years, two of these top young professors were added to a faculty that already included two of Mises’s most respected students, Israel Kirzner and Fritz Machlup, as well as the esteemed Austrian capital theorist, Ludwig Lachmann. The Austrian Economics Newsletter, begun in 1977, has, after eight issues, still
Mises, then, was a radical liberal, in the line of the Philosophical Radicals and the men of Manchester.

All the elements of radical liberalism are there: first of all, and most basic, his uncompromising rationalism, reiterated again and again. (Symptomatic of Mises's avoidance of everything he would consider mystical and obscurantist in social thought is the fact that, to my knowledge, he never in all his published writings once mentions Edmund Burke except in the context of someone who, in alliance with writers like de Maistre, was ultimately a philosophical opponent of the developing liberal world.) There is his utilitarianism, taking the end of politics to be not "the good," but human welfare, as men and women individually define it for themselves. There is his championing of peace, which in the tradition of those nineteenth century liberals most closely identified with the doctrine of complete laissez faire—Richard Cobden, John Bright, Frédéric Bastiat, and Herbert Spencer—he bases on the economic substructure of free trade. And, more surprising, there is in Mises a basically democratic concern and, in an important sense, an egalitarianism, such that this requires special comment.

Mises's fundamentally democratic and egalitarian outlook is not, of course, to be understood in terms of belief in some innate equality of talents or in equality of income. When Mises discusses the great question of equality he does not have in mind a future fantasy utopia, where each will absolutely count for one and none for more than one, but rather the empirical conditions under which human beings have hitherto found themselves in various societies. What have actually been the conditions of class, status, degree, and privilege in the history of mankind, and what difference does capitalism make? The history of pre-capitalist societies is one of slavery, serfdom, and caste- and class-privileges in the most degrading forms. It is history made by slave-owners, warrior-nobles, and eunuch-makers, by kings, their mistresses, and courtiers, by priests and other Mandarin-intellectuals—by parasites and oppressors of all descriptions. Capitalism shifts the whole center of gravity of society ("The World Turned Upside Down," as Lord Cornwallis's troops played at Yorktown). In the hackneyed but true and sociologically enormously important statement: every dollar, whether in the possession of someone totally lacking in the social graces, of someone of "mean birth," of a Jew, of a black, of someone no one ever even heard of, is the equal of every other dollar and commands products and services on the market which talented people must structure their lives to provide. As Marx and Engels observed, the market breaks down every Chinese Wall and levels the world of status and traditional privilege that the West inherited from the Middle Ages. It is the battering-ram of the great democratic revolution of modern times. Mises maintained that the pseudorevolution which socialism would bring about is much more likely to lead to the re-emergence of the society of status and the re-gradation of the masses to the position of pawns, controlled by an elite which would assign itself the title role in the heroic melato
matical economics of the profession. They are not content to repeat the terse arguments of their mentors but offer fresh and specific explanations of how and why the usefulness of mathematics in economics, though not a "null set," is far less than contemporary economists seem to realize. And they are at the same time beginning to demonstrate the explanatory power of the Austrian perspective by extending the frontiers of economics to the new problems of the 1980s.

The economics profession has for some time contended that with the "tools" of higher mathematics the contemporary economist can rise above the crude squabbles of the older non-mathematical forms of economic discourse; that it could end controversy in the discipline by force of the unshakable rigor of formal mathematics. But today the precision, the decisiveness, and the relevance of much of this "higher" economics are beginning to come under attack. Students are beginning to wonder whether it really helps our understanding of inflation and unemployment to master Laplace transforms, matrix algebra, differential equations, or linear programming. Is it not possible that these fancy techniques can no longer plausibly be considered to be tools of the economist, but have become our masters? Is it not conceivable that the exclusive reliance on these techniques that lend themselves to these techniques, to these "muscles," has made the profession not stronger, but muscle-bound? Have we the courage to admit that we have let our preoccupation with technique transform the most advanced and important of the social sciences into an exercise in sterility, into a truly dismal science?

But there is nothing dismal about a book like Mises's magnum opus, Human Action. Austrian economics is not just true; it is also exciting, sweepingly profound, and enormously encouraging about the possibilities open to a free society. It is not a settled body of doctrine but a living process of inquiry into the functioning of the market order. It not only explains the decline of the economies of the modern world, it points the way to a dramatic increase in prosperity. And it is beginning, at last, to mount a sizable following in the academic community.

Such is the stuff intellectual revolutions are made of. Don Lavoie is the editor of The Austrian Economics Newsletter and teaches economics at George Mason University in Fairfax, Virginia. He is a frequent contributor to The Libertarian Review.
drama, Man Consciously Makes His Own History.

As far as the caliber and quality of Mises’s thinking goes, my own view is that he is able to penetrate to the heart of important questions, where other writers typically exhaust their capacities on peripheral points. Some of my favorite examples are his discussions of “worker control” (which promises to become the preferred social system of the Left in many Western countries), and of Marxist social philosophy (which Mises deals with in a number of his books, most extensively and trenchantly in Theory and History.) As an illustration of the power of Mises’s thought, however, an example of greater interest might be his clarification of the relationship of Christianity to capitalism and socialism.

That there is an intimate relationship between commitment to a free society and faith in Christianity is a view trumpeted not only by many fundamentalist hucksters, but by influential conservative writers and politicians as well. The thinking behind these pious mountings could, it seems to me, be tightened up immeasurably by a reading of the brief section in Mises’s Socialism dealing with “Christianity and Socialism.”

As Mises points out, although the social philosophy implied in the Gospels is “not socialist and not communist,” the Gospels are of no help to the free society either, being “indifferent to all social questions on the one hand, full of resentment against all property and all owners on the other.” It was Christianity’s very lack of close involvement with any particular social system that was in part responsible for its phenomenal success: “Being neutral to any social system, it was able to traverse the centuries without being destroyed by the tremendous social revolutions which took place. Only for this reason could it become the religion of Roman Emperors and Anglo-Saxon entrepreneurs, of African Negroes and European Teutons, medieval feudal lords and modern industrial laborers. Each epoch and every party has been able to take from it what they wanted, because it contains nothing which binds it to a definite social order.” Interestingly, this is the same conclusion which Toqueville finally reaches in his preface to The Old Regime and the Revolution, where he despairs of Christianity’s being of any particular value for the free society, because “the patrimony of the Christian faith is not of this world.”

Christianity, moreover, could sometimes be harmful to the free society. Mises, who had witnessed the rise to prominence of a “Christian social thought” and Christian social movements that tried to distance themselves equally from socialism and from horrid laissez faire, underscored the continued warfare of the churches against liberal institutions in terms which some may find surprising: “It is the resistance which the Church has offered to the spread of liberal ideas which has prepared the soil for the destructive resentment of modern socialist thought.... It is not as if the resistance of the Church to liberal ideas was harmless.... In the last decades we have witnessed with horror its terrible transformation into an enemy of society. For the Church, Catholic as well as Protestant, is not the least of the factors responsible for the prevalence of the destructive ideals in the world today....”

Finally, Mises contrasts the ethical achievements of Christianity over two thousand years with what capitalism has accomplished in a couple of centuries: “Compare the results achieved by these ‘shopkeeper ethics’ with the achievements of Christianity! Christianity has acquainted in slavery and polygamy, has practically uncanonized war, has, in the name of the Lord, burnt heretics and devastated countries. The much abused ‘shopkeepers’ have abolished slavery and serfdom, made woman the companion of man with equal rights, proclaimed equality before the law and the freedom of thought and opinion, declared war on war, abolished torture, and mitigated the cruelty of punishment. What cultural force can boast of similar achievements?”

What emerges from these pages is by no means a free-thinking attack on Christianity per se: Mises, perfectly content with his own personal rationalist and scientific world-view, looking on all forms of “fanaticism” with an almost French irony and skeptical detachment, could not be less interested in any individual’s profession of religious faith. But, as a historical and sociological matter, the notion that Christianity is particularly useful to proponents of a free society (in reason, of course, and not as a propagandist’s trick), and the naive Sunday preacher’s idea that it is synonomous in actual practice with all elevated ethics, are rendered completely untenable.

In the conjunction in this brief discussion of great intellectual scope, rigorous reasoning, and the proud defense of classical liberal values, the reader can glimpse something of the distinctive character of Mises as social philosopher.

No appreciation of Mises would be complete without saying something, however inadequate, about the man and the individual. Mises’s immense scholarship, bringing to mind other German-speaking scholars, like Max Weber and Joseph Schumpeter, who seemed to work on the principle that someday all encyclopedias might very well just vanish from the shelves; the Cartesian clarity of his presentations in class (it takes a master to present a complex subject simply); his respect for the life of reason, evident in every gesture and glance; his courtesy and kindness and understanding, even to beginners; his real wit, of the sort proverbially bred in the great cities, akin to that of Berliners, of Parisians and New Yorkers, only Viennese and softer—let me just say that to have, at an early point, come to know the great Mises tends to create in one’s mind life-long standards of what an ideal intellectual should be. These are standards to which other scholars whom one encounters will almost never be equal, and judged by which the ordinary run of university professor—at Chicago, Princeton, or Harvard—is simply a joke (but it would be unfair to judge them by such a measure; here we are talking about two entirely different sorts of human beings). It was altogether fitting for Murray Rothbard, in the obituary he wrote for Mises in Libertarian Forum, to append these lines from Shelley’s Adonais, and it is fitting for us to recall them in the year of Mises’s centenary:

For such as he can lend—they borrow not
Glory from those who made the world their prey;
And he is gathered to the kings of thought
Who waged contention with their time’s decay,
And of the past are all that cannot pass away.

Finally, for the serious reader of politics and social philosophy who has never studied Mises my advice would be to make the omission good as soon as possible: it will save a lot of otherwise wasted effort on the road to truth in these matters. Liberalism or Bureaucracy would be a good start; or, for those with a special interest in twentieth century history, Omnipotent Government; or his Socialism, which remains for me the finest book I have ever read in the social sciences. Considering the absolutely critical place America has in Western civilization today, it would truly be a tragedy if a few establishment professors succeeded in keeping intelligent young Americans from acquainting themselves with the rich heritage of ideas left us by Ludwig von Mises.

Ralph Raico is senior editor of Inquiry magazine, and a frequent contributor to LR.
Shortly before 7:25 p.m., every Thursday evening of the school year, Professor Ludwig von Mises would enter his seminar room at New York University, take his seat and look around as he welcomed the students. The "regulars" would be there before him, awaiting his arrival. Then with a few words on the subject of the evening, he would open the seminar discussion. Thus began almost every session throughout the 21 years of Mises’s famous NYU graduate seminar in economic history.

Professor Mises was of average height. He held himself straight and erect and walked with a firm step. He always
dressed very properly in suit, vest, and tie. His grey hair and moustache were always neatly brushed. He was serious, no nonsense or frivolity in his attitude toward his subject, but his eyes sparkled. A sense of humor was apparent in the anecdotes he told and the illustrations he cited in informal remarks and ad lib answers to questions.

In 1934, anticipating political unrest and turmoil in Austria, Professor Mises made plans to leave Vienna and he took a position with the world-renowned Graduate Institute of International Studies in Geneva, Switzerland. In August 1940, with his wife, Margit, he arrived in the United States. No job awaited this refugee scholar from war-torn Europe. For several years he free-lanced, writing articles and lecturing. A foundation grant enabled him to write *Bureaucracy and Omnipotent Government*, both published by Yale University Press in 1944. Then, with the encouragement of Henry Hazlitt, he began writing what became his magnum opus, *Human Action*, published by Yale in 1949.

Mises’s first graduate level teaching position in this country began with the spring term of 1945 when he was invited by New York University, Graduate School of Business Administration (NYU, GBA) to become a visiting professor and to present a lecture course on Monday evenings. Then 63 years of age, he was embarking on a new teaching career which was to extend for more than 24 years. In the fall of 1948 he began the graduate seminar at NYU on Thursday evenings. The Monday evening courses — one semester devoted to socialism and the market, the other to government controls — ended in the spring of 1964. However, Mises continued to conduct the Thursday seminar through the spring term of 1969, when he was in his 89th year.

With NYU’s permission, Mises frequently invited friends visiting New York City to drop in on his Thursday evening seminar, and several from the area attended regularly over the years. Thus, the participants in Mises’s seminar fell into three categories — registered NYU students, occasional guests of the professor, and former NYU students especially interested in learning all they could from Mises, who continued to attend on a regular basis.

The typical registered graduate student was apt to feel somewhat at sea at the beginning of his first semester. Mises’s accent was difficult to understand at first. His vocabulary and subject matter were often foreign to what American university students usually heard in graduate economics courses. Instead of speaking in terms of econometrics, macroeconomics, economic growth, price level, economic stability, or aggregate statistics, Mises was likely to be talking about such concepts as apriorism, epistemology, teleology, purposive action, or value judgments. He assumed the participants in a graduate seminar would be well read in history and philosophy as well as economics (including his own books) and prepared for intellectual discussion. Thus, he tended to stretch the minds of those who were interested and sought to understand. One graduate student once commented that Mises’s seminar was one of the few university classes he had attended in which the students were treated like mature scholars.

Mises spoke from a tremendously broad background. He was a lawyer as well as an economist, his doctorate from the University of Vienna having been in “Both Laws — Canon and Roman.” He was a prodigious reader all his life and had a comprehensive knowledge of history. He read and spoke a number of languages. He was thoroughly familiar with the classics. He kept abreast of new books being published and he read several newspapers regularly. He was an ardent opera and theatergoer. He also went frequently to the movies. Thus, his lectures were sprinkled with allusions to persons and events of ancient and European history as well as recent happenings and people in the daily news.

Mises selected a broad general theme for each college year or semester of the seminar. Among the topics covered in the 18 years I attended were capitalism, epistemology, praxeology, bureaucracy, interventionism, socialism, Marxism, capital theory, monetary theory, interest theory, prices and competition, monopoly and monopoly prices, institutional economics, the profit and loss system, as well as various theories of the trade cycle. A half dozen words, no more, neatly and precisely written in Mises’s old-fashioned European script, on a small piece of paper, usually about 2 ½ x 3”, were sufficient to remind him of the important points he wanted to cover in an evening’s discussion.

Mises encouraged participants in his seminar to ask questions. They should not accept his every statement as absolute truth or, he said, he might as well be a dictator. They should ask questions about anything they doubted, couldn’t accept or understand. Thus, many topics were raised over the years — cartels, copyrights, agrarian reform, election returns, multinational corporations, new government regulations, Federal Reserve policies, recently published books, and even issues suggested by the latest presidential press conference. Every question offered Mises an opportunity to talk about various aspects and applications of economic theory.

Questions on “economic growth,” for instance, led Mises to discuss the nature and methodology of economics. Implied in the term “economic growth,” he explained, was the idea that it was possible somehow to measure the improvement, or deterioration, in economic conditions from one time to another. However, this is not possible. Measurement is possible, he pointed out, only when you have an unchanging “yardstick,” and there is no yardstick for measuring improvement or deterioration in conditions. Measurements may not always be perfect in physics, because of the fallibility of the persons doing the measuring and interpreting the data, but they are theoretically possible. In economic theory, however, we are dealing with ideas and values. “Economics is not potatoes,” he told us once. “Economics is human action. Potatoes are only something that people have used for consumption during a certain period of time.”

We should never forget that the realities of economics are the actions of men who are motivated by ideas, values, and plans, and who aim at ends. The economic unit from which all action stems is value. Value, like love, is subjective and always changing. We may count and weigh the potatoes and automobiles, for instance, that are produced and sold in one year. We may precisely determine how much or how many more or less potatoes and automobiles are produced and sold in a different year. But if the production and sales of potatoes and automobiles go up, while the production and sales of meat, airplanes, and shoes, for instance, go down, will conditions be better or worse? And from whose point of view? What will be the basis for comparison? If there is no unchanging unit of measurement, no yardstick, with which the economic conditions at the two different points in time may be measured, how can we know whether or not there has been “economic growth”?

“What do people mean,” Mises asked, “when they speak of measuring ‘economic growth’? People would think it foolish to try to ‘measure’ love. But when they try to measure economic conditions they are in effect trying to measure ‘love,’ the ‘love’ or preference people have for certain conditions and certain changes. The idea of economic measurement denies the distinction between human action and what takes place in the physical world outside of man.”
The reality economists deal with is the reality of ideas and actions as they are applied to external things. The realities of economics are actions. Every action is an exchange of something a person has for something he values more. But that value can no more be expressed in cardinal numbers or measured in arithmetical terms than can love. Values can only be arranged or graded in accordance with the actor’s ordinal preferences.

Value is the importance men attach to ultimate ends. Out of the subjective values of many persons acting on the market, out of their preferences for goods and services on the one hand and for money on the other, prices evolve. You are willing to pay a certain price for a good or service because you have definite ideas about the relative value of the good or service and of the purchasing power of money. The prices that result are not measurements of value, however, but exchange ratios of the two values expressed in money terms.

Mises was often asked also about the use of economic statistics in forecasting. First of all, he always pointed out that statistics are necessarily always history and as such they cannot tell us about the future. However, he realized that knowledge of the past is necessary to know what has gone on before and to be able to improve anticipations. In order to plan intelligently, businessmen need to know as much as possible about past production and past prices. The businessman, therefore, analyzes the statistician’s tables. But to them he adds most important ingredients — his own interpretation, understanding, and anticipations of future changes. What the businessman learns from the statistical reports, which always refer to the past, is one thing. What he will do in the future, on the basis of his knowledge and anticipations, is something else. The businessman must always interpret the statistics on the basis of his knowledge and understanding. Historical statistics, without theory, are of no help in making economic anticipations.

Theory and an understanding of economic principles make economic forecasting possible. They permit us to predict the consequences of certain actions. For instance, we can say on the basis of economic theory that if in 1999 the government enacts controls on milk, in the attempt to hold its price below the price that would have prevailed in a free or unhampered market, there will inevitably be certain undesired consequences — an increased demand for milk accompanied by reduced supplies. Economists cannot predict that that will happen in 1999. They cannot know if the government will enact price controls on milk in the future, for that will depend on the joint actions of people and government. Their actions will depend on their ideas. But we do know that if men come to understand the inevitable undesired consequences of enacting price controls, they will be able to avoid them, if they want to, by changing their actions.

To illustrate the effects of anticipation on the basis of more than historical economic statistics, Mises described the situation in Europe between 1910 and 1914. At that time, there was considerable discussion about what seemed to be unreasonably high prices for the stocks of certain corporations. These were corporations which manufactured things governments were likely to buy in time of war — tin goods or preserves, as well as armaments. Although the statistical reports then available contained no reference to future military conflict, enough people anticipated that the world was on the brink of war to act in a manner that bid these prices up several years before the start of World War I.

Mises’s extemporaneous remarks were often vivid, colorful, and succinct. Here are a few gems selected from my years of seminar notes:

You say the secret is in selling something above cost. But the situation is really very different. The problem is to produce something for which consumers are willing to pay above cost. Education can only hand down what was present in the old generation. The innovator cannot be educated. There is no school for the inventor.

Prices are like the snows of last winter. They come, but at the moment we catch them, they are already something of the past.

Concerning statistical averages which conceal the truly significant factors: If a man has one leg on an iceberg and the other in a fire, the average is then all right.

The French government buys and stores wine, just as this government buys and stores wheat and butter. But wines improve with age, while the same cannot be said of wheat and butter.

Ideas are called “imported and alien” when one doesn’t like them. It is exactly the opposite with wine.

Beginning with Omar Khayyam, wine has been advertised by the poets. Were the poets in the pay of the “Whiskey Trust”? Why not say that the desire for cleanliness is the result of the “Soap Trust” and its advertising?

Concerning the idea of nationality: St. Francis of Assisi and Casanova were both Italians. But what did they have in common? Only the fact that they both used the same language, though for very different purposes!

Why should the members of Congress be so nasty as to fix a minimum wage lower than their own?

What “runs away” is not the inflation, but the good sense of the government.

Saints don’t usually serve in the offices of foreign exchange controls.

The real “jewels” are morals.

Mises understood very well that the fate of the world depends on the ideas men hold. He found little in the daily papers to give him hope that the inflation would soon be halted. Thus, he was inclined to be pessimistic. Yet he told us on occasion that he was becoming more optimistic about the future, for he had confidence in “the genius of the people.” That, he said, is why he wrote his books. His hopes were also buoyed by the few brave voices in this country cautioning against continued monetary expansion and warning against the inevitable consequences to be expected from increasing government intervention. And he was encouraged by the members in his seminar who had “moral caliber and the ability” to realize “that economics books were written not only for libraries but also for some practical use. . . . Nothing is more important than the ideas, commonly called economic ideas, developed by persons we do not even know today. These ideas are the real material out of which the future will be built. . . . I have full confidence in the members of my seminar.”

Bettina Bien Greaves is on the staff of the Foundation for Economic Education.

SEPTEMBER 1981
Mises Himself

The keystone of Western civilization is the sphere of spontaneous action it secures to the individual. There have always been attempts to curb the individual’s initiative, but the power of the persecutors and inquisitors has not been absolute. It could not prevent the rise of Greek philosophy and its Roman offshoot, or the development of modern science and philosophy. Driven by their inborn genius, pioneers have accomplished their work in spite of all hostility and opposition. The innovator did not have to wait for an invitation or order from anybody. He could step forward of his own accord and defy traditional teachings. Then came the emancipation of the individual in the field of business, an achievement of that new branch of philosophy, economics. A free hand was given to the enterprising man who knew how to enrich his fellows by improving the methods of production. A horn of plenty was poured upon the common men by the capitalist business principle of mass production for the satisfaction of the needs of the masses.

Theory and History

Liberalism is no religion, no world view, no party of special interests. It is no religion because it demands neither faith nor devotion, because there is nothing mystical about it, and because it has no dogmas. It is no world view because it does not try to explain the cosmos and because it says nothing and does not seek to say anything about the meaning and purpose of human existence. It is no party of special interests because it does not provide or seek to provide any special advantage whatsoever to any individual or group. It is something entirely different. It is an ideology, a doctrine of the mutual relationship among the members of society and, at the same time, the application of this doctrine to the conduct of men in actual society.

Liberalism

The customary terminology misrepresents things entirely. The philosophy commonly called individualism is a philosophy of social cooperation and the progressive intensification of the social nexus. On the other hand, the application of the basic ideas of collectivism cannot result in anything but social disintegration and the perpetuation of armed conflict.

Human Action

The characteristic feature of the market economy is the fact that it allots the greater part of the improvements brought about by the endeavors of the three progressive classes — those saving, those investing the capital goods, and those elaborating new methods for the employment of capital goods — to the nonprogressive majority of people. Capital accumulation exceeding the increase in population raises, on the one hand, the marginal productivity of labor and, on the other, cheapens the product. The market process provides the common man with the opportunity to enjoy the fruits of other peoples’ achievements. It forges the three progressive classes to serve the nonprogressive majority in the best possible way.

The Anti-Capitalistic Mentality

He who says: The state is God, defies arms and prisons. The worship of the state is the worship of force. The worst evils which mankind ever had to endure were inflicted by bad governments. The state can be and has often been in the course of history the main source of mischief and disaster.

Omnipotent Government

The vain arrogance of the literati and the Bohemian artists dismisses the activities of the businessmen as unintellectual money-making. The truth is that the entrepreneurs and promoters display more intellectual faculties and intuition than the average writer and painter. The inferiority of many self-styled intellectuals manifests itself precisely in the fact that they fail to recognize what capacity and reasoning power are required to develop and to operate successfully a business enterprise.

The Anti-Capitalistic Mentality

Today millions are fascinated by the plan to transform the whole world into a bureau, to make everybody a bureaucrat, and to wipe out any private initiative. The paradise of the future is visualized as an all-embracing bureaucratic apparatus. The post office is the model for the construction of the New Jerusalem. The post-office clerk is the prototype of future man. Streams of blood have been shed for the realization of this ideal.

Bureaucracy

Liberalism starts from the premise that not war, but peace is the father of all things. What alone enables mankind to advance and distinguishes man from the animals is social cooperation. It is labor alone that is productive: it creates wealth and therewith lays the outward foundations for the inward flowering of man. War only destroys; it cannot create. The liberal abhors war, not, like the humanitarian, in spite of the fact that it has beneficial consequences, but because it has only harmful ones. With the triumph of liberal principles, people no longer took seriously the idea that a great war could ever again break out. But events have turned out quite differently. Liberal ideas and programs have been supplanted by socialism, nationalism, protectionism, imperialism, statism, and militarism. Whereas Kant and von Humboldt, Bentham and Cobden had sung the praises of eternal peace, the spokesmen of a later age never tired of extolling war, both civil and international. And their success came only too soon. The result was the World War, which has given our age a kind of object lesson on the incompatibility between war and the division of labor.

Liberalism

There can be no freedom of the press where the government owns every printing office. There can be no free choice of profession or trade where the government is the only employer and assigns everyone the task he must fulfill. There can be no real freedom of scientific research where the government owns all the libraries, archives, and laboratories. There can be no freedom in art and literature where the government determines who shall create them. In a socialist community the individual citizen can have no more freedom than a soldier in the army or an inmate in an orphanage.

Omnipotent Government

Mises with Percy L. Greaves, author of Understanding the Dollar Crisis, at the NYU faculty club in 1958.
The present unsatisfactory state of monetary affairs is an outcome of the social ideology to which our contemporaries are committed and of the economic policies which this ideology begets. People lament over inflation, but they enthusiastically support policies that could not go on without inflation. The suggested reform of the currency system and the return to sound monetary conditions presuppose a radical change in economic philosophies. There cannot be any question of the gold standard as long as waste, capital decumulation, and corruption are the foremost characteristics of the conduct of public affairs. Cynics dispose of the advocacy of a restitution of the gold standard by calling it utopian. Yet we have only the choice between two utopias: the utopia of a market economy, not paralyzed by government sabotage, on the one hand, and the utopia of totalitarian all-round planning on the other. The choice of the first alternative implies a decision in favor of the gold standard.

The Theory of Money and Credit

Opium and morphine are certainly dangerous, habit-forming drugs. But once the principle is admitted that it is the duty of government to protect the individual against his own foolishness, no serious object can be advanced against further encroachments. A good case could be made out in favor of the prohibition of alcohol and nicotine. And why limit the government's benevolent providence to the protection of the individual's body only? Is not the harm a man can inflict on his mind and soul even more disastrous than any bodily evils? The mischief done by bad ideologies, surely, is much more pernicious, both for the individual and for the whole society, than that done by narcotic drugs. If one abolishes man's freedom to determine his own consumption, one takes all freedoms away.

Human Action

Behaviorism proposes to study human behavior according to the methods developed by animal and infant psychology. It seeks to invesegrate reflexes and instincts, automatisms and unconscious reactions. But it has told us nothing about the reflexes that have built cathedrals, railroads, and fortresses, the instincts that have produced philosophies, poems, and legal systems, the automatisms that have resulted in the growth and decline of empires, the unconscious reactions that are splitting atoms. Behaviorism punctiliously avoids any reference to meaning and purpose. However, a situation cannot be described without analyzing the meaning which the man concerned finds in it. If one avoids dealing with this meaning, one neglects the essential factor that decisively determines the mode of reaction.

Theory and History

It is certainly possible to stop the further progress of capitalism or even to return to conditions in which small business and more primitive methods of production prevail. A police apparatus organized after the pattern of the Soviet constabulary can achieve many things. The question is only whether the nations that have built modern civilization will be ready to pay the price.

Life is a process, not a perseverence in a status quo. Yet the mind has always been deluded by the image of an unchangeable existence. The avowed aim of all utopian movements is to end to history and to establish a final and permanent Utopia. Conservatism is contrary to the very nature of human action, and it has always been the cherished program of the many, of those who dully resist every attempt to improve their own condition, in which the minority of the alert initiate.

The Anti-Capitalistic Mind

History looks backward into the past, but the lesson it concerns things to come. It does not teach indolent quiescence to emulate the deeds of earlier generation. It rouses men as Dante's Ulysses addressed his companions:

Considrate la vostra sementa:  
Fatti non foste a viver come bruti,  
Ma per sequir virgude e conoscenza.
Jerry Falwell begins his 1980 book, *Listen America,* by discussing the issue of liberty. He quotes Robert Ringer, author of *Restoring the American Dream,* who is concerned that the American dream of individual freedom will be lost. But, while praising Ringer for defending the free market, Falwell ignores the fact that the very principles of liberty which Ringer uses to defend free enterprise are also used by him to support the legalization of homosexuality, prostitution, and drugs. Falwell and his organization, Moral Majority, seem to believe that the only justifiable freedoms are economic.

In his book, Falwell emphasizes that without economic freedom all other liberties are in danger. He is right. However, if the theocratic state he envisions is established, then all liberties, including those which are economic, will be lost. For in spite of all of his talk about liberty, Rev. Falwell is no libertarian: his liberty is arbitrary, and arbitrary liberty is not liberty at all.

"Protection of each and every individual's right to acquire property is a necessity of freedom," writes Falwell, "[t]o destroy or to control a man's right to own or use property is to diminish him as an individual, for property rights are human rights. Freedom to own property is a basic tenet of this society."

By contrast, he recently signed a fund-raising letter addressed to "Dear Friend of the Moral Majority," asking the recipient to sign and return a ballot to him, voting against laws permitting homosexuality, abortion on demand, and pornography, which he calls "the three most vital moral issues affecting America today."

When Jerry Falwell says "vote," of course, he is not just using a figure of speech. During the last election campaign he predicted that the activist group which he founded, Moral Majority, would have registered four million new Christian voters by last November's election. Moral Majority "in just under two years has gained a national membership of 400,000, including 72,000 ministers and priests," according to an article by Joan Kennedy Taylor in last December's issue of *The Libertarian Review,* and Falwell's TV evangelism and letter writing campaigns continue to keep his influence growing.

How is it that Falwell can defend property rights and yet ignore the one property that each of us own, our own bodies? Ownership implies the right to do with the property as one pleases as long as the rights of others are respected. Ownership of one's body would then give one the right to engage in consensual sexual acts, heterosexual or homosexual. It also implies the right to ingest any substance, from laetrile to marijuana, and the right to carry a pregnancy to term or not. Falwell ignores the other side of his own statement. Human rights are property rights. To restrict the right to do with one's own body as one pleases violates the principle of property rights and is antithetical to the logic of free enterprise. It was John Stuart Mill who wrote in the classic *On Liberty:*

The sole end for which mankind are warranted, individually or collectively, in interfering with the liberty of action of any of their number is self-protection.... The only purpose for which power can be rightfully exercised over any member of a civilized community, against his will, is to prevent harm to others. His own good, either physical or moral, is not sufficient warrant.... The only part of the conduct of anyone, for which he is amenable to society, is that which concerns others. In the part which merely concerns himself, his independence is, of right, absolute. Over himself, over his own body and mind, the individual is sovereign.

But, say the thousands of fundamentalist ministers and members of their congregations who make up Moral Majority and its allied organizations such as Religious Roundtable, they are only speaking out on moral issues, as churches always have. However, what is being suggested is a panoply of religious laws — the aim is to establish a Christian state in place of a secular state. When Gary Potter, the president of Catholics for Christian Political Action, was quoted in an article in the January 1981 *Playboy* on what "Christianizing America" would mean, he said,

When the Christian majority takes over this country, there will be no satanic churches, no more free distribution of pornography, no more abortion on demand and no more talk of rights for homosexuals. After the Christian majority takes control, pluralism will be seen as immoral and evil, and the state will not permit anybody the right to practice evil.
Anatomy of an issue

One of the key items on the agenda of Moral Majority is to stop any and all attempts to “promote” homosexuality. The New Right has emphasized this issue more than any other. Fund appeal letter after letter urges “decent” Americans to send in their cash to fight “militant” homosexuals.

Alan Crawford, in his 1980 book Thunder on the Right, says:

The key to all of these appeals is anger and fear. As Terry Dolan of the National Conservative Political Action Committee told me, his organization’s fundraising letters try to “make them angry” and “stir up hostilities.” The “shrieker you are,” he said, the easier it is to raise funds. “That’s the nature of the beast,” he explained. The fund-raising letters of the New Right groups depict a world gone haywire, with liberal villains poised to destroy the American Way of Life.

Falwell himself, according to Crawford, admitted, “We are very much trying to create emotional involvement in these issues.”

The key purpose of exploiting the issue of homosexuality is to motivate support from frightened fundamentalists. A minister who attended a Moral Majority meeting in Pennsylvania reported in the Fall 1980 issue of Record, published by Evangelicals Concerned, that Rev. Robert Billings, first executive director of Moral Majority, said, “I know what you and I feel about these queers, these fairies. We wish we could get in our cars and run them down while they march.” However, gay people clearly serve a useful purpose in the crusade to “Christianize” America. “We need an emotionally charged issue,” said Billings, “to stir up people and get them mad enough to get up from watching TV and do something. I believe that the homosexual issue is the issue we should use.”

Falwell, on the Tomorrow show with Tom Snyder, claimed that Moral Majority is not trying to deny gays their civil rights. But once again the claim doesn’t correspond with the facts. Moral Majority National Secretary Greg Dixon, along with many other Moral Majority officials, has contradicted these claims. In a sermon he preached at the Indianapolis Baptist Temple on August 8, 1977, Dixon said, “When they say homosexuals should have their civil rights I ask one question: Do you give criminals rights like honest citizens? Absolutely not! Criminals do not have their civil rights.”

Dixon appears to view the jailing of gays as only a step in the right direction. In the 1977 Indianapolis sermon he said, concerning homosexuals, “I say either fry ’em or put them in the pen. Don’t unleash them on the human race.” Dixon made it quite clear that “fry ’em” means execution. In the same sermon he said, “I don’t know how in the world you can get a society that won’t even put their murderers to death, I don’t know how you can ever get them to put these homosexuals to death but God’s word would uphold that. They which commit such things are worthy of death.”

Might Dixon only be representing his own personal views when speaking from the pulpit of his church and not his views as a national leader of Moral Majority? On WIND radio in Chicago, Dixon appeared as a spokesperson of the group, in March of 1981, and the following dialogue took place:

Q: Does the Moral Majority have a specific position on the matter of gay rights?
Dixon: Yes, the Moral Majority would be opposed to homosexual rights.
Q: To any kind of homosexual rights?
Dixon: Moral Majority, I feel, would take the position that homosexuality is a perversion and should be a felony… From a practical standpoint you’re never going to get capital punishment for homosexuality but the Bible would certainly stand by a society that would be willing to do that.
Q: Would God’s Word allow a society to execute homosexuals?
Dixon: Absolutely correct.
Q: Do you think we should follow God’s Word?
Dixon: I said it would allow it if society was willing to do that, but I’ve got sense enough to know that we won’t even make homosexuality a felony. Let me give you an example. God’s Word would back up making adultery a felony but society isn’t going to make adultery a felony. There was a time when adultery was a felony but not now.
Q: If you had your way, would adultery be a felony?
Dixon: Yes, if I had my way but I can’t have my way.
Q: If you had your way how would homosexuality be a capital crime?
Dixon: If I could have my way, yes. These are moot questions, they are stupid questions and they are silly questions.
Q: Why is it a silly question?
Dixon: I’ll be happy to tell you why it’s silly. Because I never called for the State of Indiana, the General Assembly, to pass a law to make homosexuality a capital crime. I have called for the General Assembly of the State of Indiana to make homosexuality a felony. That’s the reason the question is silly.
Q: Dr. Dixon, would you throw all gays in jail?
Dixon: In the first place, just because you have a law against a particular crime doesn’t mean that the penalty is always to throw everybody in jail.
Q: Felony is not something like a misdemeanor, you’re talking about jail.
Dixon: But in general terms, and by the way up to four years ago it was a crime in the State of Indiana. Yes, I believe that homosexuals ought to be in jail, I certainly do.

Dixon and his supporters succeeded in getting Don Boys, the Administrator of the Indianapolis Baptist Temple’s school, elected to the Indiana House of Representatives. One of the first efforts undertaken by Boys was to introduce a “Right to Decency” bill to make it a felony to be homosexual. Boys wrote in a 1979 book Liberalism: A Rope of Sand, “We want homosexuality to once again be a crime. We want homosexuals to be pressured into seeking help and to stop living as if Christ never lived on the earth and never told men how to live. If they refuse to obey the law, they should be placed in jail after a fair trial for the good of society.” The Boys bill had as its express purpose the jailing of homosexuals. His book explained, “I don’t hate perverts; I just want to see them in jail away from decent, innocent people. That’s what my bill to reinstate sodomy as a crime would have done.” According to the Indianapolis Star the bill called, “for an automatic 2-to-21-year prison sentence for those found guilty of committing homosexual acts.” Greg Dixon pushed hard for the Boys bill; he even rented a large arena and staged a “Rally for Decency” to show support for it. Two major fundamentalists were brought in from out of state to promote the bill at this rally; these two were Anita Bryant and Jerry Falwell.

Similar views concerning capital punishment are held by Dean Wycoff, a spokesperson for Moral Majority in the San Francisco area. Wycoff announced that Moral Majority, along with a coalition of other fundamentalists, intended to spend $3 million on a media campaign to build anti-gay feeling in the community. Wycoff commented, “I agree with capital punishment, and I believe homosexuality is one of those crimes that could be coupled with murder and other sins.” According to Wycoff the campaign was begun in San Francisco because it is “the Sodom and Gomorrah of the United States and the armpit of this pervverted movement.” These antics were enough to cause the Chicago Tribune to editorialize that “Falwell should worry less about what his
enemies are doing to make him look foolish and more about what his associates are doing to make him look dangerous.”

In the area of other “moral” issues, most members of Moral Majority, if not all, favor the death penalty. Murder is a capital crime, they say, and they claim abortion is murder. The Moral Majority Report of Illinois published an article in its December-January 1980-81 issue, “The Bible and Abortion,” by S.M. Davis, which states, after calling abortion murder, that the Bible teaches “if a man purposely injures a women carrying a child, and the child...dies, ‘then thou shalt give life for life.’” It seems as if the article is saying that the death penalty is an appropriate punishment for abortion. But the verses in question actually do not support the theory that abortion is murder.

What Exodus 21:22,23 does say is, “If two men are fighting, and in the process hurt a pregnant woman so that she has a miscarriage, but she lives, then the man who injured her shall be fined whatever amount the woman’s husband shall demand, and as the judges approve. But if any harm comes to the woman and she dies, he shall be executed.” This verse clearly says that the death of a fetus is not a capital crime and therefore not worthy of capital punishment. This verse does not treat the fetus as being equal with the mother and it is not afforded equal protection.

The Rev. Dan Fore, head of the New York state chapter of Moral Majority, was questioned on the abortion issue when he appeared at a meeting of the National Coalition Against Censorship. Fore told conference participants, “If a woman kills a child, she’s a murderer.” A woman then asked him, “Then she would be executed?” Fore became very uncomfortable and told the audience that he wasn’t sure, because abortion was now legal: “It’s an interesting question, I’ll have to study it.” Since Fore’s hesitation seemed to come from the present legality of abortion, one can only guess what his answer will be if a “Right to Life Amendment” passes Congress.

**The Moral Majority and the First Amendment**

Another issue of great concern to Moral Majority is pornography. A recent full-page article in the national Moral Majority Report reported on the activities of the Rev. Tom Williams who “is involved in a local battle against pornography.” Williams is not attacking the sale of explicit magazines in some adult bookstore. The “pornography” he is fighting is in the Washington County Library in Abingdon, Virginia. It isn’t even one or two books on the shelves that he wants banned for being “utterly vile and filthy” but “well over 100 books.”

In November, 1980, Rev. Williams demanded to be furnished with a list of all library patrons who had checked out books which he declared “pornographic.” The librarian, Kathy Russell, courageously refused to hand over the names. According to Nat Hentoff, reporting in the February 2, 1981 issue of Inquiry, Williams claimed that “the liberal crowd in Abingdon” is resisting the direction this country has taken. Russell and her supporters, says the Reverend, “must realize they can’t impede the change. All they can do is to be run over.”

Hentoff also records that Reverend George Zarris, chair of Moral Majority of Illinois, told the New York Times, “I would think moral-minded people might object to books that are philosophically alien to what they believe. If (their libraries) have the books and they feel like burning them, fine.”

Another example of Moral Majority’s fight against pornography occurred in Annapolis, Maryland. Jim Wright, executive director of that state’s Moral Majority chapter, filed a complaint with the office of the state’s attorney charging a local bakery with selling pornographic cookies. Wright says, “These are obscene cookies, and there’s no way you can get around that.” The offending bakery was selling...
gingerbread men (and women) that were anatomically correct. The charges were not pursued by the state since no law had been violated.

Moral Majority official Tim LaHaye is the author of a 1980 book, *The Battle for the Mind*, which is an attack on the ultimate enemy of fundamentalism, humanism. In the book he discusses one of the world's greatest art treasures: "The giant replica of Michelangelo's magnificent David stands nude, overlooking that beautiful city. Quite naturally, this contradicts the wisdom of God, for early in Genesis, the Creator followed man's folly by giving him animal skins to cover his nakedness... The Renaissance obsession with nude 'art form' was the forerunner of the modern humanist's demand for pornography in the name of freedom. Both resulted in the self-destructive lowering of moral standards."

With such an attitude, it's hardly surprising that another endeavor of the Moral Majority is its recent campaign to clean up television and films. Television and the rest of the media are allegedly in the hands of a humanist conspiracy, to take over the United States and destroy the basic 'pro-family' values upon which it is built. (While using the word "humanist," some Falwellians apparently mean "communist." According to Moral Majority national board member Rev. Jim Kennedy, humanism is actually "communism waiting to be crowned with its political rights.")

If Moral Majority is successful in taking over this country and proceeds to "Christianize" it, one wonders what will be left of our thriving movie industry. Falwell was once asked, "What is the justification for forbidding movies? Why does it apply to even Walt Disney-type films?" His reply was, Any spiritually discerning person must acknowledge that the vast majority of Hollywood movies are anti-Christian in their philosophy, and immoral in their content... Modern movies have done more to undermine the moral fibre of our nation than any single aspect of the media. That influence is now spilling over into television. Man cannot continually look upon sin and evil without either developing a taste for it, or lowering his standards in regard to it. We do not even condone the so-called "good" movies since they also contribute to the support of an industry which is basically corrupt. It is never right to accentuate the good in order to tolerate the evil.

Falwell, in a tirade against the networks before the City Club of Chicago, said "The plan is to go down, down, down until all the networks are dumping cesspools in our living room. That's the kind of pornography we're talking about." He told the audience, "We don't need any bedroom scenes or four-letter words." And in a seeming reversal of his defense of private property he claimed that television "is an invasion of our privacy and our civil rights" because "the airwaves belong to the people."

Khomeini in America?

Former Secretary of Health and Human Services Patricia Harris, in a speech at Princeton University, compared the actions of Moral Majority and its founder, Rev. Jerry Falwell, to those of the Ayatollah Khomeini. Her concern was centered around "the arrogance with which they propose a crusade to 'christianize' America." Such a crusade, Harris believed, is "dangerous for our democracy."

The religious "republic" of Khomeini is in fact a theocracy, defined in Webster's New 20th Century Dictionary as "government by priests claiming to rule by divine authority." Harsh and cruel punishments are the typical sentence for those who offend the strict morality of the fundamentalists who rule the nation of Iran. Homosexuals, adulterers, and prostitutes are publicly executed. Pornography, defined in the broadest sense possible, is illegal. Censorship is official policy. And strict penalties also await those found guilty of committing economic "crimes" in violation of Khomeini's concept of providing goods and services.

Is it fair to compare the smiling Falwell to the grim Iranian dictator? Are the followers of Moral Majority as intolerant and dangerous as the followers of the Ayatollah? Is there a significant difference between the "Christianized" America envisioned by the religious Right and the horrors of the Islamic regime?

Hundreds of fundamentalist ministers and members of their congregations filled the auditorium of the Indianapolis Baptist Temple in early February, 1980, at the national convention of Moral Majority. Founder Jerry Falwell had called a conference of these "key pastors" and supporters. One of the best received speakers was an aging minister, W. E. Dowell, who had been Falwell's pastor many years ago and is now one of the leading lights of the Bible Baptist Fellowship and heads Moral Majority for the state of Missouri. Taking the pulpit, Dowell was direct and to the point:

Newspapers asking Brother Jerry Falwell today, several time they've asked him this, "Well, won't it be something like it is over in Iran—you religious people taking over—become a religious system." I said, I don't know what he said, but if it had been me I'd said, well the other crowd's had it long enough and they failed, and made such a terrible blot of it, it's time somebody take over.

His remark was loudly cheered by his audience. If one is to believe Falwell's statements that he is against establishing a theocracy, then one must assume he holds a minority view among the members of Moral Majority. And certainly Falwell has claimed to "have a divine mandate from God to go right into the halls of Congress and fight for laws that will save America."

 Worried as he is about omnipotent government, Falwell should be calling for less government involvement in morality, not more. Instead, the Moral Majority leaders and allies are seeking ever increasing government influence. Rev. Robert Billings, besides being the first executive director of Moral Majority, is Vice Chairman of Paul Weyrich's Committee for the Survival of a Free Congress. Weyrich, in turn, according to New Right direct mail king Richard Viguerie, "spent hours with electronic ministers Jerry Falwell, Jim Robinson and Pat Robertson, urging them to get involved in conservative politics," and affiliates of Weyrich, together with Billings himself, are responsible for the drafting of the proposed Family Protection Act, which is the key piece of legislation being promoted by Moral Majority. The Religious Roundtable revival meeting in Dallas last August was attended not only by evangelists but by such politicians as Senator Jesse Helms, Representative Phil Crane, and

A Moral Majority rally: "It's time somebody take over."
Ronald Reagan himself. No wonder that a page one story in *The Wall Street Journal* last September was able to quote Richard Viguerie as saying, “We’ve already taken control of the conservative movement, and conservatives have taken control of the Republican Party. The remaining thing is to see if we can take control of the country.”

If they do, no one will be safe from the prying and probing of the ensuing monster state. How powerful a government would we need to police the morality of 220 million people? Will every bakery be policed to prevent the sale of obscene cookies? What bureaucracy will make sure that the libraries don’t have “vile” books on their shelves? How big will our government prisons become when we jail all homosexuals? Will the death penalty be enforced on women who “murder their babies” through abortion? The greatest irony of all is that even those economic freedoms in which the members of Moral Majority so fervently believe will fall victim to the moral state. A theocratic state requires a big, expensive government; when you add in the cost of the super-military the Moral Majority also wants, massive governmental expenditures can be expected—and the only way to pay for them will be to severely limit economic freedom by increasing the power of taxation.

Civil liberties and economic freedoms are two sides of the same coin. Destroy one, and the other will disappear with it. Under the Theocratic State, freedom and liberty will be memories of the past. This is something that the members of Moral Majority have not recognized.

An article in the liberal religious magazine *Christian Century* noted,

There is evidence that these new groups take an inconsistent view of the role of government. For the most part, they desire to limit its power. Yet on certain issues they call for more government involvement. For example, they seek a broad role for government in eliminating abortion, in restricting the rights of homosexuals, in taxing for new weapons systems whose need is unclear, and in mandating prayer and Bible reading in public schools. In short, they do not want government intervention when their own freedoms are at stake, but they are willing to use the power of government to force life-style changes on others. One does not have to be a proponent of abortion or homosexuality to see their inconsistency. If it is not right to use the government to force one group to tolerate the life style of others, then it is equally wrong to use the government to compel the second group to tolerate the life style of the first. [Richard Smith and Robert Zwier, “Christian Politics and the New Right.”]

Such an attitude has grave implications for the future of liberty. For, as the great Ludwig von Mises wrote in *Human Action*,

No open attack upon the freedom of the individual [has] any prospect of success. Thus the advocates of totalitarianism choose other tactics. They reverse the meaning of words. They call true or general liberty the condition of the individuals under a system in which they have no right other than to obey orders...They call freedom of the press a state of affairs in which only the government is free to publish books and newspapers. They define liberty as the opportunity to do the “right” things, and, of course, they arrogate to themselves the determination of what is right and what is not. In their eyes, government omnipotence means full liberty. To free the police power from all restraints is the true meaning of their struggle for freedom.

The blatant threat from Falwell and his colleagues, Moral Majority and its allied organizations, lies not in the expression of their opinions, bigoted, intolerant, and inconsistent as they may be. Nor does it lie with their hypocrisy in the conduct of their affairs. Instead, the danger comes from their clearly and amply-documented eagerness to force their views upon the rest of society through the power of government at every level.

The only moral policy is one of liberty.
The elitist as egalitarian

TOM G. PALMER

AS THE LIBERTARIAN movement grows, it is to be expected — and welcomed — that its growth will generate attacks and criticisms from the left and the right. In fulfillment of this expectation, academician Philip Green, chairman of the government department at Smith College in western Massachusetts, has come forth to do battle. Green, an outspoken “egalitarian,” has previously attacked libertarianism in the pages of The Nation (“America Amok” and “In Defense of the State”) and democracy (“Two Cheers for the State”). In The Pursuit of INequality he is at it again, attempting to refute not only libertarianism but other currently popular systems that oppose egalitarian statism.

The Pursuit of INequality is an important anti-liberal (in the classical liberal sense of that term) work which deserves close examination. For one thing, Green is a thoroughgoing and consistent egalitarian. He recognizes, as few leftist egalitarians do, that if we are to have “equality of outcomes” we cannot have “equality of opportunity.” As Green points out, “The two aspects of liberal individualism that will be discussed — the principle of equal opportunity for individuals and the principle of limiting government...
interference with the ‘free’ market — might at first glance seem unrelated to each other; certainly many people who uphold the first of those principles would repudiate the second unqualifiedly. But in practical fact they are deeply related.” Green at least has the courage to recognize this truth and to reject both market freedom and equality of opportunity.

Four chapters of his critique of “egalitarianism” are devoted to a somewhat confused refutation of “sociobiology.” While Green does occasionally score some solid hits, in the process he exhibits numerous flaws in his understanding (e.g., treating sociologist Steven Goldberg, author of The Inevitability of Patriarchy, as a “sociobiologist”). While I do not agree with the sociobiologists’ genetic, sexual, and racial explanations and justifications of the existence of “inequality,” I still found Green’s attempted refutation of them unconvincing. As Green admits, he believes, “The crucial difference between explanations of social phenomena is not in their ‘scientific validity’ but in the purposes they serve.” Since these arguments do not serve his purposes, Green opposes them. This is hardly a convincing starting point for a serious refutation.

It is libertarianism, however, which the author believes to be the most formidable opponent of his new egalitarian order. In the section entitled “The New Individualism: The State, the Public, and Liberty” he focuses on the political theories of Milton Friedman and Robert Nozick, to the exclusion of such Austrian economists as F.A. Hayek and Murray Rothbard, seeming to deliberately sidestep any confrontation with the (to my mind) much more sweeping arguments for libertarianism, both from the classical liberal side and from that of more thoroughly anti-statist partisans.

Green presents himself as a mainstream modern liberal, but his basic analytical and sociological framework is Marxist. It is, however, a decadent pop-Marxism, without the virtue of Marx’s understanding of social reality. Marx (along with Adam Smith, Carl Menger, Ludwig von Mises, F.A. Hayek, and Murray Rothbard, to name a few) understood social reality, as Thomas Sowell put it, “in terms of the mutually constraining complex of relationships whose results form a pattern not necessarily similar to the intentions of any of the individuals involved.” That is, it takes more to explain society than the “intentional” goodness or wickedness of social actors. Green superficially employs a Marxist sociology of change, yet he simultaneously places the blame for injustice and inequality on the intentional behavior of discriminatory, racist, greedy, mean businessmen, unfiltered by any matrix of incentives and disincentives and thus reduces the Marxist system to a mere parody of social analysis.

He has apparently read Milton Friedman’s Capitalism and Freedom and a book review of Robert Nozick’s Anarchy, State and Utopia. He makes some telling points against Friedman’s “public goods” justification of the state. When it comes to Nozick, however, Green is on much shakier ground. Nozick’s step-by-step justification of the minimal state is totally misstated by Green. Green states that Nozick is a social contract theorist, although Nozick himself writes in Anarchy, State and Utopia that his view “differs from social compact views in its invisible-hand structure.” Green has Nozick “postulating” the legitimacy of the minimal state, whereas Nozick attempts to demonstrate its legitimacy. Green reverses (to the detriment of the argument) the order of Locke’s argument concerning the legitimacy of property, by listing it as property in the order of exchange and then in one’s own labor, although both Locke and Nozick have it the other way around. Green sidesteps the crucial Nozickian argument that, because one cannot avoid the assignment of rights to control objects that cannot be used by two or more different people at the same time and in the same respect, all political theories are property rights theories.

The distortions and misrepresentations of Green’s argument could be catalogued forever, but the core of his anti-libertarian perspective is contained in his answer to the question he puts to the reader: “Is a ‘free man’ who owns large-scale means of production the same kind of ‘free man’ as one who does not, who owns nothing but his own body and its ability to do labor?”

To which he answers that “the owner of a mere body is ‘free’ to sell labor at its price, and get the returns on that sale from his or her employer. The latter sells products, the price of which includes the price of the employed labor plus profit. But whereas the employee can bargain with the employer about the rate of pay for labor, there is no bargaining about the disposition of profit: that belongs entirely to the employer; it is the ‘property right’ of ownership of productive property.” (Emphasis in original)

But this is self-contradictory. If profit is defined, as Green defines it, as the difference between the product of labor and its wage, and if wages are subject to negotiation, then profit is subject to negotiation. But Green’s argument isn’t just self-contradictory — it is in fact based on the fallacies of Marxist economics which have been exploded again and again in economics, from Eugen von Böhm-Bawerk’s famous refutation in his Capital and Interest and Karl Marx and the Close of His System to Israel Kirzner’s recent brilliant analysis in Competition and Entrepreneurship and his most recent collection of essays, Perception, Opportunity, and Profit. The fallacious Marxist view is that exchange is not “equal” when the transactors possess unequal resources; therefore the equality of opportunity offered by a liberal society is in reality inequality. Hence, Green’s explicit opposition to the liberal or libertarian advocacy of equality of legal rights.

Green sketches a brief scenario which he believes typifies “capitalist society.” A family lives in a house near a lake. . . . The members of the family all work at a nearby industrial plant. They contracted freely to work there, agreed quite cheerfully to the contractual terms of employment, and consider themselves still. However, because of its ability to employ them and their fellow workers at average wages lower than the average revenue it earns from the workers’ total contribution to the sale of its products they help make . . . the corporation is enabled to make a profit — to realize an investable surplus. With this investable surplus, which over time becomes immense, the company buys the lakefront property for expansion purposes. It promptly closes down the family’s access to the lake. Of course, the lake has a circumference, not all of which is taken over by the company; with some trouble, the family can still find a public beach. But then the company, which manufactures chemicals, begins to discharge its residues into the lake. . . . The family decides to take its freely-earned wages and move. At this point, however, the company uses its surplus funds to contract with a road-building company to drive a giant highway from its expanded operation to the outside world — a sloping downhill road in which giant trailer trucks reach a double-clutched climax about ten feet from the family’s front door. Their property has become worthless; they can no longer sell it at a price that will enable them to replace it with a similar abode. The company, of course, will buy it from them — for a song.

. . . Without ever expecting to do so in the slightest, this family of workers have lost the relationship between surplus value in the particular form of private profit outside their control, and alienation. . . .

It would indeed be shocking if Green’s portrayal were an accurate picture of what the market was like. But it isn’t. As an attempted portrayal of the market in which giant trailer trucks roll downhill in one corner of the world, Green’s horror story can perhaps best be described as plain silly. It conveniently leaves out all possible options and alternatives which the workers — or for that matter, the corporation — might have in such a series of events. In a market system based on prop-
reproduce it. But a laborer produces in a day more than the "equivalent labor" needed to support himself or her at the subsistence level which according to Marx determines his or her wages. This difference is called "surplus value" and is what constitutes profit. Hence the capitalist who employs labor reaps surplus value — profit — which would otherwise belong to the worker.

This theory fails totally to explain such phenomena as business losses, rising living standards, etc. — which gave rise to its refutation by the marginalists, whose key point was that an exchange of goods is never based on equal valuations, for if valuations were truly equal, there would be no

would-be philosopher kings. This elitist argument is beneath contempt. If I cannot wisely run my life (or even choose others to advise me), why is Green more competent to do it for me? Does not the argument apply to him as well? How easily egalitarianism slides into elitism.

The second argument is that past statist interventions have had a powerful influence on present institutions, therefore justifying further interventions. It is regrettably true that previous injustices have had lasting effects, and to the extent that the victims of such injustices can be identified and compensated, libertarians favor strict and immediate restitution. That is, after all, the

Professor Green's book is a polemic for the imposition of the rule of intellectuals over the rest of us.

reason to exchange. Rather, voluntary exchange occurs because the parties to the exchange each place unequal valuations on the goods: I value your three oranges more highly than my ten apples, and vice versa; the exchange is unequal for both parties; and the outcome is mutually beneficial.

Green never stops to analyze — or even to make explicit — the theories underlying his story of the family by the lake. Nor does he address the theories of the marginalist economists — he barely pauses to scoff at them, but in doing so he reveals that he does not even understand the economist's use of the word "marginal."

There are two further arguments which Green believes provide the coup de grace for libertarianism. The first is that consumers do not have "the faintest idea" of how to spend their incomes on the goods and services now provided by government agencies; "only trained people familiar with the specific problems and paid to devote time to them can do that," i.e., Green and his fellow basic requirement and foundation of the system of justice underlying the free market. However, the results of many previous injustices cannot be so rectified (the criminal parties — or the victims — are dead, or the victimization did not result in any lasting theft of property with identifiable victims or their heirs). This decidedly does not justify further state action. By way of example, the past actions of states have had profound effect on the ideas widely held today. Had Socrates not been condemned to death by the Athenian jury, the world might be a far different place. Vagrancy laws and Green's beloved compulsory state "education" have done much to shape present values and attitudes toward work. Do these facts justify further censorship and crushing of dissent? or justify socialism? Quite the contrary. If anything, they should strengthen our resolve to do away with such injustices, not encourage us to heap on more of the same. Green's recitation of past state interventions merely provides us with pow-

erful examples of how states inevitably use their power to exploit and oppress their subjects — as would Professor Green's egalitarian state.

We now come to what I consider to be the underlying purpose of the book. After studying the work, I found The Pursuit of Unequality to be aptly named, though not for the reasons the author might advance. It is appropriately named because, in the final analysis, inequality is precisely what Professor Green is pursuing.

Under the pretense of criticizing all those who oppose the imposition of egalitarianism on society, Green argues that the opponents of egalitarianism are merely defending their "class interests." This is not only a questionable technique of argumentation (at least in isolation), it also neatly sidesteps the question of Green's own class interests. The Pursuit of Unequality is first and foremost a polemic for the imposition of the rule of "intellectuals" such as Professor Green over the rest of us.

Why is this so? The answer is to be found in the characteristics that define intellectuals as a class. As Thomas Sowell argues in his brilliant Knowledge and Decisions, intellectuals are people who deal in the transmission of articulated knowledge. Knowledge comes in many forms. Prices in the market, for example, convey effective, but unarticulated, knowledge; one need not know the causes of a diminution or expansion of the supply of wheat, for example, for the price rise or fall to lead to a change in one's purchasing patterns. This is merely one example of the many kinds of unarticulated knowledge that come into play in the regular interactions of human beings. In another interesting work which supplements the point Sowell makes, Polanyi's The Tacit Dimension, Polanyi discusses the implications of the fact that "we know more than we can say," that is, we know more than we can put into explicit language. Playing the piano, painting, sculpting, turning a lathe, all rest on kinds of knowledge which are
“tacit” rather than explicit. But they are instances of knowledge, nonetheless.

Since intellectuals like Professor Green are interested in both the cognitive process and in the occupational process (job of articulating and transmitting knowledge), they have unique class interests — interests vigorously advanced by Philip Green.

It is in a statist context that intellectuals can most fully advance these class interests, by attacking as “unjustified” and “irrational” all resort to cognitive processes other than those employed in their own occupation. Green criticizes entrepreneurs “whose own performances have never been explicitly judged by any ‘objective’ standard”; that is, they are not fully susceptible to the kind of cognitive process regularly employed by Professor Green’s class. Professor Green merely seeks to establish and perpetuate a new ruling class, the intellectual class of which he is a member.

That this form of class rule is on the rise is incontestable, for intellectuals have in recent years come to tremendous power through the growth of a bureaucratic state that seeks, not merely the kind of forcible expropriation of resources that has characterized states since the first robber band began to systematically plunder its victims, but the subordination of all social decision-making processes to its own power. Such “scientific” regulation of others requires the articulation of knowledge on a previously unprecedented scale. Notice, for example, the specifications for bus seat padding in Chris Hocker’s article on “Transit as if People Mattered®” in last month’s LR. The reams and reams of paper required by such a regulation can be the product only of the cognitive processes of articulation, the stock-in-trade of the intellectual class.

That Professor Green is simply interested in his own class interests, or privileges, is nowhere more evident than in his claim that an egalitarian socialist state need not violate freedom. His notion of freedom, of course, is limited to the pursuit of the occupational interests of intellectuals — the freedom to engage in the articulation and transmission of certain kinds of knowledge. The freedom to work, trade, produce, love, and otherwise express one’s values voluntarily is not to be protected; rather, such voluntary processes of choice are to be totally usurped by the scientific-rational-intellectual-egalitarian-bureaucratic state.

Green’s egalitarian state would in fact prove to be more hierarchical than any previously witnessed. For in state-ruled societies, as Gaetano Mosca pointed out in his classic book The Ruling Class, minorities rule majorities, rather than majorities rule minorities. . . . In reality the domain of an organized minority, obeying a single impulse, over the unorganized majority is inevitable. The power of any minority is irresistible as against each single individual in the majority, who stands alone before the totality of the organized minority. At the same time, the minority is organized for the very reason that it is a minority. A hundred men acting uniformly in concert, with a common understanding, will triumph over a thousand men who are not in accord and can therefore be dealt with by one by one. Meanwhile it will be easier for the former to act in concert and have a mutually understanding simply because they are a hundred and not a thousand. It follows that the larger the political community, the smaller the proportion of the governing minority to the governed majority be, and the more difficult will it be for the majority to organize for reaction against the minority.

Green’s elitism comes out clearly in his discussion of who will do the undesirable “dirty work” in an egalitarian community, and who will hand out the assignments. The question of the “dirty work,” says Green,

is a question that can seem daunting only to someone who is not an egalitarian in the first place. The logic of egalitarianism is that if any job has such an impact on those who do it as to become a degrading trap, then it cannot be a normal career line in an egalitarian society. The answer to the question, in other words, is either that no one will do such jobs (we will not have a society of equals until we have created machines that eliminate such work); or that everyone will share them out, or will do them in turn at different stages of life (e.g., teen-agers by way of national service); or that they will be done by incorrigible criminals by way of punishment (but a more humane punishment than being in prison), or by the truly feeble-minded by way of “treatment” in the community, or by genuine drop-outs who don’t want to do work that entails any responsibility at all. (Emphasis added)

The last four alternatives, of course, are clearly the choices that will be implemented, being both non-utopian (machines, indeed!) and the path of least cost to the decision-makers in the state apparatus (teenagers, for instance, have a lesser capability than their parents of fighting back; that is why they are always the first to be conscripted).

Let us merely chalk this vision of a future Gulag up to an unfortunate dichotomy between a beautiful theory and the difficulties and exigencies of its practical implementation, it should be pointed out that Green is deliberately condemning all of society’s “square pegs” —everyone who won’t fit into Green’s carefully prepared round holes — to chattel slavery. This is not merely an unfortunate and unintended result of Green’s egalitarianism, it is the logical and intended means of its implementation. The poet whose poetry is not approved by the state, the entrepreneur driven to the black market, the “economic criminal” who saves a few grams of rice for his or her children, the “grumbler” unsatisfied with the job assigned to him or her by the state, the homosexual, the malcontent, and above all, the libertarian, must be forced at gunpoint to labor for the state (that is, for Green and Co.). This is the real meaning of Professor Green’s humanitarism; there is no humanity here, only the malodorous evil of coercion, exploitation, and naked class domination.

In short, Professor Green has presented us with a subtle attempt to rationalize the creation of a new hierarchical system of masters and slaves — with his class holding the whip — all in the name of humanity, justice, and equality. That he viewed libertarianism and the growing libertarian movement as the most significant obstacle in the path of the intellectuals’ climb to class power (via the convenient political vehicle of egalitarian ideology) is a powerful testament to the emerging acceptance of libertarianism as the champion of freedom, progress, justice, and peace.

Roots of Austrianism

DANIEL KLEIN

THE ENGLISH-LANGUAGE edition of this work, that began the economic tradition which Ludwig von Mises and F.A. Hayek considered themselves part of and did so much to advance, was published by Glencoe Free Press in 1950 and has long been out of print. Fortunately, New York University Press has recently reprinted that edition and added an article by Hayek to serve as an introduction. Originally published in 1871 as Grundsatze der Volkswirtschaftslehre, this book is the pioneering work of what became known as the Austrian school of economics.

Substituting Carl Menger’s Principles of Economics for every textbook presently being used in college Introductory Economics courses would, in about 95 percent of the cases, mean an improvement in students’ understanding of the subject. Menger’s work, even though it is now 110 years old, still excels as an accurate outline of the foundations of economic science. Menger’s success can be attributed mainly to his original method of analysis.
of the neoclassical tradition are mechanistic constructs, reactors with perfect knowledge, governed by perfectly quantifiable revenue and cost alternatives, which in turn are comprised of infinitely divisible and costlessly exchanged goods.

But the many human characteristics that are absent in the neoclassical system are actually the starting points of Menger's work. He sees economic reality as comprised of individuals searching for and engaging in transactions in discrete goods, from which they expect to benefit. As he explains, "Error and imperfect knowledge may give rise to aberrations, but these are the pathological phenomena of social economy and prove as little against the laws of economics as do the symptoms of a sick body against the laws of physiology."

This book is primarily an exposition of what was later to be called microeconomics. Menger also, however, provides the basic Austrian analysis of production which forms a framework for macroeconomic generalizations — he was the first to explain how production proceeds through stages, which he called orders. First-order goods are the finished products, consumer goods; second-order goods are those goods which are used to produce first-order goods; third-order goods are those used to produce second-order goods, and so forth. This structure of production, composed of different kinds of independent higher order (capital) goods, is the general backbone of modern Austrian capital and monetary theory, which was to be developed by Ludwig von Mises and Nobel prize winner F.A. Hayek.

Contemporary mainstream macroeconomic theorists, Keynesians, and supply-side advocates would find in Menger little to agree with. Most of them conduct their analyses with grand models which are supposed to portray the "entire economy." These models usually correspond to either no microeconomic laws or the fallacious ones derived from neoclassical micro models. The individual, the true driving force of the economy, is obliterated in favor of autonomous aggregates like "consumption," "investment," "savings," and "gross national product."

Menger and the Austrians who followed him staunchly disapprove of this treatment of important macroeconomic concepts. In regard to wealth, for example, Menger advises that "national wealth... be regarded rather as a complex composite of the wealths of the members of society, and we must direct our attention to the different sizes of these individual wealths." Austrian macroanalysis sees that different kinds of capital goods are employed in individuals' investment and production plans, and these plans spontaneously mesh with the plans of other individuals to form production processes of higher and lower stages. Changes in relative prices between stages and industries come about as a consequence of different economic forces acting upon different individuals. The Austrian is then in a position to develop theories of the causes, manifestations, and results of these forces, and the Austrian school, therefore, has a unique, direct bond between its macroeconomic theory and its microeconomic foundations.

Menger's ideas have not yet received the attention that such a unique and consistent body of thought deserves. The Principles stands as possibly the most original, enlightening, and universal presentation of economic principles published prior to this century — even compared to the works of Menger's two most prominent students and intellectual heirs, Friedrich von Wieser and Eugen von Böhm-Bawerk, it is less in need of semantic revision. It is to be hoped that the decision to republish this book is a sign that Menger's great contributions are beginning to be fully appreciated.

BOOKS OF LUDWIG von MISES

NOW IN PRINT: WITH ANSWERS TO OUR ECONOMIC PROBLEMS

THE ANTI-CAPITALISTIC MENTALITY
An analysis of the illogical "envy and hatred" of those who blame their own failures on the capitalist system.
140 pages, paper $6.00

BUREAUCRACY
An explanation of why the inefficiencies of bureaucracy are a necessary corollary of political activities which cannot be limited by market competitions.
138 pages, hardcover $7.00

A CRITIQUE OF INTERVENTIONISM
A translation of some of Mises' writings of the 1920s explaining how political interferences with the market processes always reduce consumers' satisfaction.
164 pages, hardcover $8.95

ECONOMIC POLICY
Published posthumously, 1979, these six lectures are a very readable introduction to the basic economic principles expounded by Mises and their relationship to the primary problems of our times.
115 pages, paper $4.95

EPistemological problems of economics
A collection of essays that demonstrate the logical legitimacy of economics as a science of human action. This volume provides an insight into Mises' thinking that made possible his many contributions. 1981 reprint.
262 pages, paper $7.00
hardcover $20.00

HUMAN ACTION
The most rigorously reasoned statement of the case for capitalism. The counterweight of Marx, Keynes and other proponents of government-run economies.
924 pages, hardcover $35.00

LIBERALISM (formerly, THE FREE AND PROSPEROUS COMMONWEALTH)
A translation of Mises' 1927 presentation of 19th century liberalism principles of limiting government to the protection of lives and peace in the market place with private ownership of the means of production and equal justice under law.
225 pages, paper $5.00
hardcover $15.00

NOTES AND RECOLLECTIONS
A translation of Mises' personal thoughts and experiences in Europe before he fled to the United States in 1940.
198 pages, hardcover $9.95

OMNIPOTENT GOVERNMENT
Written during World War II, an analysis of statism in general and German Nazism in particular.
300 pages, hardcover $12.00

ON THE MANIPULATION OF MONEY AND CREDIT
A translation of some of Mises' major contributions on money, credit, inflation and the trade cycle.
350 pages, hardcover $15.00

PLANNING FOR FREEDOM (ENLARGED)
A collection of essays and addresses exploding fallacies of middle-of-the-road approaches to economics, with an unrivaled paper on Profit and Loss.
292 pages, paper $6.00

THEORY AND HISTORY
A serious and important contribution on the importance of sound ideas for both history and the future of our civilization.
393 pages, hardcover $13.00

SOCIALISM
608 pages (plus index) paper $5.00
hardcover $11.00

THE THEORY OF MONEY AND CREDIT
Mises' first major contribution – the application of the "Austrian" subjective theory of value to money, credit and the trade cycle.
413 pages, hardcover (old ed.) $8.00
544 pages, paper (1981 ed.) $5.00
hardcover (1981 ed.) $11.00

THE ULTIMATE FOUNDATION OF ECONOMIC SCIENCE
A concise presentation of the fundamental principles of a free society and refutation of popular fallacies undermining our tranquility and prosperity.
165 pages, paper $5.00
hardcover $15.00

New York residents, please include appropriate sales tax

The renaissance of lying

JEFF RIGGENBACH

EARLIER THIS YEAR when a young Washington Post reporter named Janet Cooke became, however briefly, the best known American fiction writer of her generation, the event which catapulted her so suddenly into that position of eminence—her abrupt resignation from the Post after returning the Pulitzer Prize she had just been awarded—occasioned quite a flurry of agitated but, alas, mostly profitless discussion in the opinion columns of the nation’s newspapers and magazines. As all the world knows by now, the problem with Ms. Cooke’s receipt of a Pulitzer Prize lay in the fact that she did not receive the prize for fiction, but rather for news feature writing, and the fact that the work for which she received it was not a news feature, but a piece of fiction, a very traditional, quite competent short story, in fact, about Drugs, Depravity, Hopelessness, and Despair on the Wrong Side of Town, and written in a contemporary version of the “naturalistic” style of Ambrose Bierce and Stephen Crane.

I compare Janet Cooke’s style to Bierce and Crane, rather than to Hemingway or John O’Hara or Sinclair Lewis, all of whom might seem more obvious choices, because on the one hand it was Bierce and Crane (along with Mark Twain) who taught Hemingway, O’Hara, and Lewis much of what they knew about writing, and because on the other hand Bierce and Crane make much better symbols than Hemingway, O’Hara, and Lewis—they less ambiguously embody and cast into relief the peculiar characteristics of the fiction writer who is also a news reporter, a journalist. Both Bierce and Crane earned their livings as newspaper reporters, and both of them pub-

lished their most famous works—The Devil’s Dictionary, The Red Badge of Courage, An Occurrence at Owl Creek Bridge, “The Open Boat”—in the pages of newspapers. By contrast, Hemingway, O’Hara, and Lewis only began their careers as newspapermen before moving on to The Novel—never mind that their novels were read in their own time as they are still read today: as journalism, as more or less accurate portraits of World War I (A Farewell to Arms), the Spanish Civil War (For Whom the Bell Tolls), 1920s vintage small town respectability (Appointment in Samarra), and 1920s vintage evangelical Christianity (Elmer Gantry).

It might be objected that such topics as these fit better today under the heading “History” than under the heading “Journalism.” But this is mere sophistry and hairsplitting. “History” is only another name for very old news. And “Literature,” Ezra Pound said, “is news that stays news.” There are, after all, only three possible subjects which any writer can address: he can write about the past, whereupon he will be called an historian; he can write about the present, whereupon he will be called a journalist; or he can write about the non-existent—the future, the purely fanciful, the purely theoretical—whereupon he will be called a fiction writer, a seer, or a sage. Whichever of these subjects a particular writer may choose, however he may come to be labeled by those who read his works, it all comes in the end to the same thing—reporting. We all live in the same world, the only one there is—and, therefore, the only one anybody has to write about. “The man who writes about himself and his own time,” George Bernard Shaw wrote nearly a hundred years ago in the pages of Benjamin R. Tucker’s Liberty, “is the only man who writes about all people and about all time.” But Shaw did not go far enough. The man who writes about himself and his own time is the only man who writes at all. “I should not talk so much about myself,” said Thoreau on the first page of Walden, “if there were anybody else whom I knew as well. Unfortunately, I am confined to this theme by the narrowness of my experience.” So it is, of course, for everyone. What can any man write about but his own experience of life, including what he reads and thinks and daydreams as well as what he does and has done to him? Inevitably, all authorship is autobiog-

raphy.

There is a sense, then, in which all authorship is journalism—though not, of course, in the same degree. The sine qua non of journalism is that it be concerned in its subject matter principally with news. And what is news? Simply, whatever is new in whatever field one may be writing about. Ask a politician, “What’s new?” and you’ll get a different answer from the one you’d get if you put the same
NATIONAL LETTERS

question to a literary critic or a baseball fan or a paleontologist. But whether you write of what’s new about the past; or of what’s new about the present; or of what’s new about the conceptual and imaginative frontiers of human creativity; or just about what’s new with you, you are a journalist. Whether you write non-fiction or fiction or something in between the two, if you write about news, you are a journalist.

If it seems odd, even perverse, to speak of fiction writing as a species of journalism, this is only because we have somehow forgotten what we once knew very well about the history of modern fiction generally — and American short fiction in particular — and the ways in which that history has been bound up from the beginning in the history of modern journalism. Why do I say particularly the history of short fiction? Because most news is written for broadcast or periodical publication, and it is precisely the character of almost all such writing that it is short, succinct, pithy, to the point; that it respects its readers’ chronic lack of time. “The increase within a few years of the magazine literature,” Edgar Allan Poe wrote nearly 150 years ago in the column called “Marginalia,” which he intermittently conducted during the 1840s in the pages of four leading American magazines, the Democratic Review, the Southern Literary Messenger, Graham’s Magazine, and Godey’s Lady’s Book, is but a sign of the times — an indication of an era in which men are forced upon the curt, the condensed, the well-digested — in place of the voluminous — in a word, upon journalism in lieu of dissertation. I will not be sure that men at present think more profusely than half a century ago, but beyond question they think with more rapidity, with more skill, with more tact, with more of method and less of excessiveness in the thought. Besides all this, they have an increase in the thinking material; they have more facts, more to think about. For this reason, they are disposed to put the greatest amount of thought in the smallest compass and disperse it with the utmost attainable rapidity.

Nearly a hundred years later, as we all know, the situation Poe describes is the same, only more so. The idea that we are confronted by an information glut has become not only a cliché but also an understate-keeping with the rush of the age. We now demand the light artillery of the intellect. ... On the other hand, the lightness of the artillery should not degenerate into pop-gum, — by which term we may designate the character of the greater portion of the newspaper press. ... Whatever talent may be brought to bear upon our daily journals, and in many cases this building his career: “Holding steadily in my view my ultimate purpose — to found a Magazine of my own, or in which at least I might have a proprietary right, it has been my constant endeavour in the meantime not so much to establish a reputation great in itself as one of that particular character which should best further my special objects. Thus I have written no books and have been so far essentially a Magazinist.” And in fact, all his major works, the tales and essays — and many of the poems too, though mainly the tales and essays — which have made his one of the greatest international reputations ever earned by an American writer, were originally written for and published in the pages of magazines ... and, more significantly, newspapers.

Why more significantly? Because for all Poe’s apparently singleminded devotion to the magazine medium, it was in fact the pages of daily and weekly newspapers that he enjoyed most of his biggest popular successes and published a number of his most famous pieces — including “The Raven,” “The Gold Bug,” and “The Facts in the Case of M. Valdemar,” his famous tale of the man who was mesmerized on his death bed and proceeded to remain conscious and rational and without visible signs of deterioration for seven months after his death — to be exact, until the very moment when he was awakened from the hypnotic trance, whereupon “his whole frame at once — within the space of a single minute, or even less shrunk — crumbled — absolutely rotted away beneath my hands. Upon the bed, before that whole company, there lay a nearly liquid mass of loathsome — of detestable presence.” This story was first published in 1845 in the Broadway Journal, a weekly tabloid, not unlike the modern-day New York Review of Books in conception, which Poe edited during the second of his nearly five years as a resident of New York City. It was offered not as fiction — something the Journal theoretically
didn't publish at all—but as a factual article on a series of extraordinary but real events which had taken place only a couple of months before publication. And it was widely accepted at face value.

Mesmerism was in the news in 1843, just as heroin in the news today. It was an article of common knowledge, not one of those things which "everybody" knows, with that complete intolerant certainty that is the characteristic product of ignorance—that mesmerism was a momentous scientific discovery whose possibilities were almost limitless. Today, of course, it is an article of common knowledge that heroin is a drug which enslaves and destroys all who use it, and that heroin is encouraged and spread by satanic "pushers" who commonly choose defenseless children as their victims. When Poe published his fictitious account of an amazing experiment in mind over matter through mesmerism, common knowledge insured that many of his readers would accept it as truth. When Janet Cooke published her fictitious account of the home life of Jimmy, the eight-year-old junkie, common knowledge insured that many of her readers would accept her story as truth. After "The Facts in the Case of M. Valdemar" first appeared in the Broadway Journal, it was quickly reprinted on both sides of the Atlantic, drawing fan mail from students of mesmerism in Boston and Edinburgh, causing a sensation in London (where it was reprinted in both the Morning Post and The Record, a widely circulated weekly), and taking in so many American readers that Poe felt obliged before the year was out to explain in a letter to one of his best friends that the tale was "a hoax, of course." After "Jimmy's World" first appeared in the Washington Post a year ago this month, it was quickly reprinted by other important newspapers all over the country, touching off a search of the Washington, D.C. ghetto for some sign of Jimmy himself, advancing Janet Cooke immediately and dramatically in the newsroom pecking order at the Post, and winning her a Pulitzer Prize.

There was, of course, one big difference between the case of Poe's hoax and the case of Janet Cooke's. "Judging from the reaction in the industry," Nicholas Von Hoffman wrote this past July in The Press, "an innocent reader might think that printing fiction is an unheard of occurrence in our business, a sin so mortal that anyone suspected of committing it will sure as shootin' be drummed out of our Daily Bugle news corps." But no such hypocritical reaction followed upon the exposure of Poe's mesmerism hoax. Why should it have? Poe's readers and fellow journalists knew that he had done the same thing before, and more than once, though most notably only about a year before, in April of 1844, when the story we know today as "The Balloon Hoax" was published in the daily New York Sun as a straight news story under the headline "Astounding News by Express via Norfolk! THE ATLANTIC CROSSED IN THREE DAYS." As Julian Symons writes of what happened next, in his recent Poe biography The Tell-Tale Heart (Harper & Row, 1978), "The story caused excitement of a kind not known again until Orson Welles's War of the Worlds was broadcast nearly a century later. According to Poe, the square surrounding the Sun building was besieged, 'ingress and egress being alike impossible,' for several hours. The regular Saturday edition announced the news, and then the extra was delivered, contain-
portantly, because his readers and fellow professionals did not regard short fiction as we do today, as essentially and inherently different from short non-fiction. Both were published as a matter of course by both daily newspapers and weekly and monthly magazines. Sometimes the fiction was clearly labeled as such; sometimes it was only identifiable as fiction because it strained credulity beyond endurance if it was taken as fact.

In 1845 the phrase “short story” meant nothing more than a story which was short—irrespective of whether the story in question was true, or even factual. It seemed to the journalists of the eighteenth and nineteenth centuries, apparently, that they were all really in the same business, the business of telling stories. And it seemed to them, apparently, that it made no difference whether the details of any particular story—the persons, places, things, and events which in the most fundamental sense are that story—were drawn from the real world or simply “made up”—that is, drawn from the world of the imagination, a world which is different for every writer. They seem to have realized, these early journalists, that it is entirely meaningful to speak of a work of fiction as true or false, accurate or in accurate, factual or packed with misinformation, just as it is entirely meaningful to speak in such terms of a work of non-fiction. Where is it possible to find so factual, so accurate, so altogether true an account of what is now happening in the American economy as in the pages of Ayn Rand’s science fiction detective thriller *Atlas Shrugged*? And where is it possible to find such a false, inaccurate, distorted compendium of misinformation on the same subject as in the pages of Lester Thorow’s recent tract, *The Zero-Sum Society*?

It is perfectly reasonable to look to fiction for accurate reportage. One finds it there often—quite as often, in fact, as one finds highly imaginative invention in works of non-fiction. And is it even necessary to specify the reasons not only why this should be so, but why it should be inevitable? Or are they so obvious to common sense that to name them is to insult the intelligence of one’s readers and bore them silly to boot? Well, nothing ventured, nothing gained. “Newspaper men like to think of news as something wholly objective,” H.L. Mencken wrote in “A Note on News” which he published in the Baltimore Evening Sun in May of 1937 (for by that time what had been the common knowledge of every journalist in Poe’s day had been utterly forgotten), “but it can be so only under exceptional circumstances. In its ordinary forms it is not merely a statement of over facts; it is some concrete individual’s opinion of the truth and significance of those facts.”

“It is, in truth, this admixture of opinion,” Mencken continued, “which gives good reporting all its savor. The minutes of Congress include all the essential facts about its proceedings, but no one wants to read them in that form: they are too dull, and what is more, they are largely unintelligible. What the reader wants is not only a report of what went on, but also an interpretation of it. If the reporter in the gallery is a good one, he produces a clear and vivid picture of the show. He does so by getting his own view of it into his report, and by illuminating that report with whatever wisdom he may have at his command.” Even the reporter who believes “that he is there to discover and publish the truth,” Mencken argues, will run up against the obstinate fact that “the definition of truth differs among reporters as much as it does among other men, and in consequence every one of them is thrown back, soon or late, on his habitual attitudes of mind. He can see only through his own eyes, and he can weigh conflicting evidence only in the balance of his own judgment. That judgment may be better in some men than in others, but in none is it completely unbiased.”

How could it be? Think of the influences and pressures ranged against the very possibility. “There is,” Mencken wrote, “primarily, the influence of congenial philosophies. Every Englishman, said W.S. Gilbert, is born either a Liberal or a Conservative. This is, again, the powerful effect of schooling, and of the worldly experience that runs parallel with it. Finally, there is the tremendous effect of everyday associations—of the ties of friendship and common interest, of customary wont and habit. The reporter succumbs to these pulls just as every other man succumbs.” And any news report, therefore, is no more likely in principle to be accurate or true than a frank fiction or blend of fact and fiction written about the same subject. All writing of any kind is inescapably the presentation of some individual’s perspective on the world, as that world is revealed in some particular event(s). And no and two individuals are totally alike.

This is why the magazine and newspaper writers of Poe’s day made no distinction between their fictional pieces and their non-fictional pieces, but thought of both and frequently referred to both as “articles.” This is why newspapers and magazines of current issues and events routinely printed outright fiction in their columns, not only in Poe’s time, but before it and long after it. American newspapers were still printing fiction as a matter of course as late as the 1930s. This is why it has been common practice ever since Poe’s time for American newspapers and magazines to employ eminent novelists and writers of short fiction to cover major events of various kinds, from the days when Stephen Crane covered the Spanish-American War to the days when Ernest Hemingway covered the Spanish Civil War to the days when Ray Bradbury covered the moon landing to the days when Gore Vidal and Norman Mailer cover the political conventions. This is why every distinctly and unmistakably American fiction writer of even the slightest importance in the past hundred and fifty years has begun his career or spent some significant portion of his career as a working journalist, writing about current events and ideas for newspapers and/or magazines. This is why the overwhelming majority of these American fiction writers have worked entirely or primarily in the medium of the short story and have commonly made their livings as writers of fiction for magazines.

Journalism has been central to the American literary tradition because America has been from the beginning of that tradition a nation in a hurry. Poe wrote of the vogue of journalism arising out of “the rush of the age,” reasoning correctly that an age in a hurry needed a literature in a hurry—which was what Matthew Arnold called journalism: “literature in a hurry.” But what made America a nation in a hurry except the industrial revolution which had been touched off by its creed of individual freedom and its system of near-laissez-faire capitalism? The industrial revolution had begun in England, of course, which was why journalism emerged there first. But where conditions were freer, the industrial revolution grew all the bigger all the faster, and the pace of change and the sheer volume of new ideas, new information, and new inventions became more and more manageable even more quickly. Since around 1840, if not before, any American who feels a strong interest in the doings and comings and goings of ideas of his own age has found himself with too few hours in the day to keep up with it all. And he has therefore demanded, as Poe said, the brief, the compact, the succinct, the pointed: the light artillery of the intellect. He has demanded that he be both amused and informed by anything he reads. And he has demanded that any lengthy thing he reads justify its length by providing him with detailed knowledge of some aspect of American life which cannot be compressed into the compass of a few thousand words.

Long before modern philosophy and modern theoretical science began implanting an
extreme skepticism in the minds of almost all American college graduates, American writers had been writing exactly the sort of thing Janet Cooke recently became so famous by writing for the Washington Post. And their reason for doing so seems to have been not so much philosophical or scientific as broadly political: it seems to have originated, that is, in the individualist doctrine that, no two individuals being exactly alike and every individual being unique, it is inevitable that any two pieces of writing about the world by any two different individuals will inevitably be personal statements whose real subject is not so much the world as the mind of the individual doing the writing. American writers seem to have understood that journalism is an art long before Seymour Krim got around to announcing it officially in his indispensable essay "The Newspaper as Literature" (1967) and long before New Journalists like Tom Wolfe and Hunter Thompson got around to proving it conclusively at about the same time Krim was making the announcement. Both the announcement and the proof had been offered before, many times over. If it is now commonplace that most of our best contemporary writers are engaged in journalism rather than in some other kind of writing, this is only because our writers have learned long since, intuitively if not consciously, that there is no other kind of writing. And if many in the American newspaper business today have somehow eluded the discovery of this fact so far in their own careers, and have lately joined in a rousing chorus of damnation against those who "besmirch the profession" by "lying in print," it is our part not to follow such fools, but to suffer them gladly — and hope they will live to see wiser days.

Giants in the Earth

DAVID BRUDNOY

MEN OF STEEL. MEN WITH icewater in their veins, with stout hearts and unblemished souls, men brave enough to confront evildoers, however overpowering in number or might, men who walk tall, straight into the lion's den without flinching: We speak of heroes, known for their valiant deeds, not of celebrities, known for being known. We speak of "heroes" as if there were any to be found in an unheroic age embarrassed by if not actually hostile to genuine heroism. Ours is a society that devours its political leaders, whom we consider heroic when they come to office in a landslide and whom we consign to the rubbish heap mere months after they begin to take charge.

Gone, totally, is the sense we once had that mere mortals could in our own time stride the earth like giants; gone, too, our once common expectation that what other generations knew we could know: achievers without feet of clay. Little wonder, given the ridiculousness of those who pop up now and again to make waves or muscle into power, that only the pathetic find merit in our homegrown would-be savours while almost everybody is drawn to those who claim nothing of us but adoration of their glamour.

Fact denies us comfortable familiarity with genuine heroism, repeatedly dashed any hopes we may have that so-and-so will somehow be less a fraud, less a knave, than the other so-and-so who came before him. We turn to fiction, to pulpy novels fit for the beach, to witless extravaganzas on television, to colossal motion picture epics to find our giants, and when the latter turn to dust (Clash of the Titans; Legend of the Lone Ranger — August LR) we shrug and come back next Saturday night, knowing that sooner or later we'll get the real thing. On the whole the movies are increasingly dreadful, but there are enough of them that work, enough that satisfy our craving for someone to look up to, among them the two biggest hits of the year thus far and two lesser items that, albeit less directly, mine the same ore.

Superman II: Raiders of the Lost Ark

Neither Clark Kent nor Indiana Jones exemplify the heroic mode when they come before us in their civvies, in their business suits and spectacles. Giants don't wear neckties, Nature's noblemen don't work in offices. But these mundane fellows have only to change into costume, the one, that garish red and yellow and blue flying suit, the other, the dashing though rumpled uniform of the great white hunter, and they are off, their destinies proclaimed first by what they are wearing, then Superman (Christopher Reeve) swings a superpowered villain (Terrence Stamp) in Superman II, one of those rare sequels that is better than the original.
by what they do. Superman II and Raiders of the Lost Ark immediately captured the affections of the moviegoing public for all the obvious reasons—their wit, humor, tongue-in-cheek quality, nifty tricks and derring-do—and also because they center on the exploits of men who are more than men. Kent in tights has the powers his Krypton genes programmed into him; Jones in pursuit of the Ark of the Covenant has, ultimately, the power literally of God rushing into the fray when all would appear to be lost. There is, I think, something more than simple coincidence accounting for the tremendous success of the two films this year that chronicle the adventures of men who without magic are the functional equivalent of geldings.

We are extremely uncomfortable with heroism flowing entirely from the essence of humanness. Not that otherworldly powers will alone make a film a winner—Perseus had Zeus, no less, on his side in Clash of the Titans, and the film came a cropper. But without the distancing from familiarity and the humdrum that a large dose of something greater than mankind presents, a hero capable of outstanding deeds would seem to moderns to be an extended joke. We would titter in disbelief if—even without the silly stuff at the end of Raiders, the religiousity that so jarringly made explicit what ought to have remained, in keeping with the bulk of the film, implicit and delightful because of the implausibility — Indiana Jones hadn’t always around him the obvious blessings of the Deity whose holy of holies he so guiltily sought to save from the Nazis.

Both films delight us with their special effects and their off-beat romantic diversions. Both perked up a dreary summer that confronted us not long before with the morose spectacle of both the President and the Pope targeted for death and that went on for many weeks. I write this in early July—without the major national religious observance, professional baseball, to take our minds off inflation and Jerry Falwell. They came at the same time, a double dose of the yearly gift that Hollywood offers by way of the blockbuster magic movie in the latter-day tradition of Star Wars and Rocky and Close Encounters and the first Superman and The Empire Strikes Back. They are both exceedingly violent, but the violence is never for a moment believable or jarring, since only bad humans, Nazis, suffer in Raiders and only renegade bullies from Krypton take it on the chin for long in Superman II. And they both are graced by splendid casts: wonderfully resilient heroines (Margot Kidder as Lois Lane and Karen Allen as Maid Marion in Raiders), deliciously hateful villains (Terence Stamp and Gene Hackman in Superman II and Ronald Lacey and Wolf Kahler as Raiders’ Nazis), and perfect heroes. Christopher Reeve has shown in one other starring movie role and on Broadway in The Fifth of July that he is not yet a very versatile actor, but as Kent/Superman he is flawless; flawlessly nerdy and ineffectual when mild-mannered, flawlessly virtuous when, shall we say, on the wing. And Harrison Ford, though not Steven Spielberg’s and George Lucas’s first choice for Indiana Jones, brought with him to Raiders the good will and heroic reputation he has built up as Han Solo in the two Star Wars films and brought off without error the difficult transformation of character from college professor to wry adventurer. This much, minus the verbiage, any ten-year-old will tell you.

More, however, accounts for the glorious triumph of these two movies. I am convinced that both films touch us at precisely the points of our greatest cultural vulnerability: our remorse that we have no real heroes, and our unease occasioned by our national loss of faith. The Moron Majority and its witch-hunting comrades in the battle against the twentieth century fall short in the heroism department (unless the Rev. Donald Wildmon and Jesse Helms and Strom Thurmond and Jeremiah Denton will suffice for you as heroes) but they have ingeniously allied a specific combine of repressive atavisms with the endlessly repeated claim to the blessings of God. Not only hillbillies and snake-kissing primitives in backwater gospel tents feel the lack of a certainty through faith that the neo-fascistic evangelist demagogues now offer.

The rest of us, at least many of the rest of us, want somehow to secure our sophistication with our childlike craving for Big Daddy Up In The Sky, and since we cannot, absolutely cannot, be soiled by anything so preposterous as hate-fear Fundamentalist crackpottery, we take half the loaf. We take a few hours of escape into fantasy, into magic, into powers, or if you will, The Power—this year’s version of The Force from Star Wars-Empire Strikes Back. What Clark Kent has always within him, save only for the brief period of powerlessness that comes when he voluntarily abandons his destiny in order to bed Lois Lane, what Kent manifests for all to see when he strips off his tedious business outfits and appears before us in his priestly vestments; what Indiana Jones is capable of because he is fighting the battle of The Lord; what, for that matter, The Lord demonstrates stupendously at the eleventh hour; what both these giants in the land possess is what secularized mankind devoutly desires: certainty, belief, and superhuman might, not to mention a large enough cause to engage our attention, something along the lines of striving, as Superman put it on his first outing on screen, for “truth, justice, and the American way.”

Dragonslayer

The abysmal critical failure of Excalibur (July L.R.) ought to
do nothing to quench the cinema fires currently burning for medieval pageantry; for all that John Boorman's stupefying retelling of the Arthurian saga left its audiences panting for release, it also revealed the photographic potential of the murky forests and sorcery-mystery of that time out of mind. *Dragonslayer* demonstrates how a less artsy and more spirited approach to similar material can work beautifully. Unburdened by the weight borne by any new approach to a classic tale, unburdened, that is, by the upfront aura pervading *Excalibur*, this joint venture from Paramount Pictures and Walt Disney Productions starts afresh with a new story set in ye olde England before it grew merry and infuses that dimly known epoch with surefire ingredients. *Dragonslayer* has a ferociously terrifying villain, a dragon who flies, belches fire, lives in ooz and 'neath a lake of fire, mourns its young, and feasts periodically on a diet of tender virgin. It has an old wizard, Ulrich (Sir Ralph Richardson), who is cranky and visionary and sagely able to husband his resources for the time when a neat miracle will come in most handy. It has a dashing young wizard's apprentice, Galen (Peter MacNicol), who is to *Dragonslayer* what Mark Hamill's Luke Skywalker is to the *Star Wars* cycle, combiner of swain with beloved of the magic powers. It has lovely maidens, Caitlin Clarke and Chloe Salaman, the latter a victim of the dragon's specialized appetite, the former a fit companion for the young blond avenger. It has eye-popping meticulous settings, gloomy landscapes, several awesome flights of fancy in the special effects department, and it has a script, by Hal Barwood and Matthew Robbins, that straddles expertly the fine and often niftyy fence separating camp from conviction.

Our young giant, Galen, is nothing more than a dreamy, idealistic teenager working on his first degree in wizardry, until his master confers upon him the power and arrangements for his baptism by (literally) fire — dragon's breath — in service to truth, justice, and (why not?) the Saxon way of life. Like Clark Kent, Galen is pleasant but ineffectual without magic; like Indiana Jones, his eye is turned by a come-caped commander. Like both of the heroes of the two major movies before us, the hero of *Dragonslayer* is, if we squint our eyes and stretch our minds to the limit, us, if only we could fly or work for God or wear a glowing amulet that might make us immortal. *Dragonslayer* lacks the gusto and jocularity and dynamism and, for that matter, the star-power in its lead performer, of *Superman II* and *Raiders of the Lost Ark*, and its destiny is not to be numbered among the top ten grossers of all time. Moreover, it arrived when the other two movies came to the screen and is overshadowed by them. But its theme is their theme, in all but detail, and its heroic structure and its glorification of the intertwined glory of human bravery and superhuman grace and giftedness is unmistakably its prime claim to our affections.

**Escape From New York**

Manhattan for *Superman* is Gotham, your ordinary crime-ridden big city. Manhattan for John Carpenter's latest screen venture is a maximum security prison, circa 1979, containing three million of the most horrid criminals in the land. The future doesn't look so good to moviemakers these days, and in a later column I'll have more to say about that. For the moment, *Escape From New York* comes before us as a sometimes chilling glance ahead into a world that is unfortunately far more plausible than the world the progressive-optimist brigade holds out for us. While the plot of *Escape* is silly — a terrorist seizes the American President's plane, crashes it into Manhattan, leaving only the President alive, and the government in need of someone to go into the prison island to rescue Numero Uno — the vision is at once dyspeptic and convincing. The man chosen to find and rescue the President, and with him, somehow, not sufficiently cogently told to bear repeating here, to save the world, diverges 180 degrees from Superman and the sorcerer's apprentice, veers even from the corrupted but still noble Indiana Jones. Snake Plissken (Kurt Russell) is anti-hero all the way, a very rotten apple indeed, just about to be consigned forever, as are all of Manhattan Prison's inmates, to his fate in the urban jungle as gargantuan jail. He had, we learn, been decorated for bravery in the Battle of Leningrad—World War II, presumably — and the man responsible for patrolling (from across the rivers) the island prison, Bob Hawk (Lee Van Cleef), sees Snake as America's one chance to save the President and humanity. There follows from this decision a suitably harrowing adventure in rescue, with the expectable confrontations with the scum-lord of the prison, Duke (Isaac Hayes), and a generous dose of bloodshed and savagery.

Snake is sinewy and snarly, one eye patched, the other glowing with hatred, and he is "heroic" because he will be killed in 24 hours if he doesn't rescue the President. His only touch with magic is a handi-pak of electronic gadgetry, and he has only the usual plot devices of suffer-make to suffer-get out in the nick of time, to recommend him to the company of the other screen giants. His situation, however, and the status of a society that is so ridiculed with crime that it makes of our once greatest city our current greatest testament to the failure of the American democracy, draw *Escape From New York* into this discussion.

All four movies share these elements: one man on whom everything depends; powers beyond that one man qua man that prove crucial to the happy resolution of the conflict; and a peril that is truly do or die. And of course, the world becomes the playpen of three villains with Kryptonite might; Indiana Jones must get to the Ark of the Covenant, containing the broken tablets of the Commandments and the majesty of Jehovah, or the Nazis will get it and, Hitler thinks, be invincible; Galen must kill the dragon or the dragon will gobble up the virgins of the village and the dragon's children will, presumably, roam the land and wind up eating everybody; and Snake Plissken must get the President and the papers and tape cassette he carries or the world summit conference coming up will dissolve into another world war, presumably the final world war.

On Snake's muscular shoulders, and through his forced compliance with a desperate plan standing little conceivable chance of success, rests the future. On many a thinner reed have the fates of nations depended, and as the old poem goes, for want of a nail the shoe was lost, for want of a shoe the horse was lost, for want of a horse the king was lost, and with it, the kingdom. Once there were heroes, all too mortal, often vicious, often, like Alexander, merciless to enemies, giddy, rich, in the manner of the noblest incarnation of the grape, but a hero just the same. Now there are only politicians and bureaucrats, game wardens in the human zoo we call metropolis, and public relations firms trying to make a silk purse out of John McEnroe. A week ago a young man, robbed of everything including his clothing, was chased by a crowd of 40 people hurling bottles and cans into a New York subway station. When he died, screaming, electrocuted by the live third rail, the crowd howled with laughter. That is New York City, July 1981. In *Escape*, when assassinating New York, 1979, Snake Plissken, for all that he is a vicious criminal, becomes a hero, a giant. It's all in the timing.

— L.R.'s film critic also reviews for *WNAC-TV (CBS), WRKO-AM (ABC), and The Boston Herald American. He is host of "The David Brudnoy Show on radio and of "Nightedine" on television, writes a nationally syndicated newspaper column, reviews books and restaurants, and lectures frequently on popular culture and politics. BOOKS

FEAR & FORCE VS. EDUCATION: A Study of the Effects of Coercion on Learning by Charles G. Wieder, Department of Art Education, The Ohio State University. Written for those teachers, parents, and others concerned with humane, quality education. Topics: fear and force tactics prevalent in schools—their demeaning effects on teachers, and their detrimental effects on learning; the kind of respectful, purposeful atmosphere that must prevail for real learning to occur; educational structure—the range and limits of teacher authority, a Libertarian Student Bill of Rights, proper behavioral restrictions, and improper social sanctions which suppress intellectual and psychological growth. Soft cover, 72 pp., $2.50. Order from M. A. Gray Dist., 201 Old Bristol Rd., Boone, NC 28607.

AT LAST! A book club for Libertarians. Harliean Miscellany, Rt. 10 Box 52A, Florence, SC 29501, offers books about freedom at unbeatable prices, and many other benefits.

September 1981
vo·ra·ci·ous (vo·ra'·shəs) adj., 1. Eating with greediness; ravenous. 2. Ready to swallow up or engulf. 3. Insatiable, especially as applied to U.S. Congress. (Latin, vorare, to devour.)

It's true.

Yes, it has become a common observation that the spending and taxing practices of Congress are out of control. This is dangerous both to your pocketbook and your freedom.

Over 75 percent of the public believes that cuts in government spending are possible and would make a major contribution to an improved economy. While others talk, we're doing something about it.

A PHILOSOPHY.

The National Taxpayers Legal Fund was founded in 1973 to protect the civil liberties of taxpayers threatened by government taxing, spending, and regulatory policies.

We believe that it is important to challenge the all-too-common notion that taxpayers exist merely to serve the government. We reject the idea that the civil liberties and property rights of taxpayers can be ignored when the time comes to pay for all the programs dreamed up by bureaucrats and special interests.

The rights to own property, contract freely, and retain profits are fundamental human rights jeopardized by a centralized, overgrown government.

A PROGRAM.

Cases in the files of NTLF reveal the regularity and frequency of IRS abuse against individual taxpayers. Proposed legislation known as the "Taxpayers Bill of Rights" is the major reform effort to protect the constitutional rights of taxpaying Americans. NTLF research has focused congressional and public awareness on the urgent need for this protection.

The Project on Military Procurement. About 30% of next year's federal budget will go to the Pentagon. Much of it will be misspent or wasted. Yet the Department of Defense is considered by many to be exempt from public scrutiny. NTLF's Project on Military Procurement has shown the cost overruns and ineptitude at the Defense Department to be a national scandal, endangering the legitimate defense interests of the country.

The relationship between the Pentagon and contractors in the defense industry is scrutinized by the Project and brought to public attention, as is the impact of military spending on the economy, taxes, and peace.

The Banking Study Project. NTLF conducts a continuing investigation of the influence of multinational banks on American foreign policy. The International Monetary Fund and the Overseas Private Investment Corporation illustrate the capacity of the banking community to transfer its liabilities onto the hapless taxpayer.

We are initiating research projects on election law reform, alternatives to the bankruptcy of Social Security, and fundamental changes in the federal income tax system.

NTLF is involved in a wide range of issues because we are convinced that fraud, waste, and regulatory excess in government are themselves violations of taxpayer rights. You can get involved by becoming a sponsor of the National Taxpayers Legal Fund. Your contribution is tax-deductible.

National Taxpayers Legal Fund
201 Massachusetts Ave., N.E.
Washington, D.C. 20002

☐ Send me more information about NTLF
☐ Sign me up as an NTLF sponsor. I enclose $25 or more so please send me Tax Action Report every month.
